

## ACTIVE DIRECTORY STIMULATION

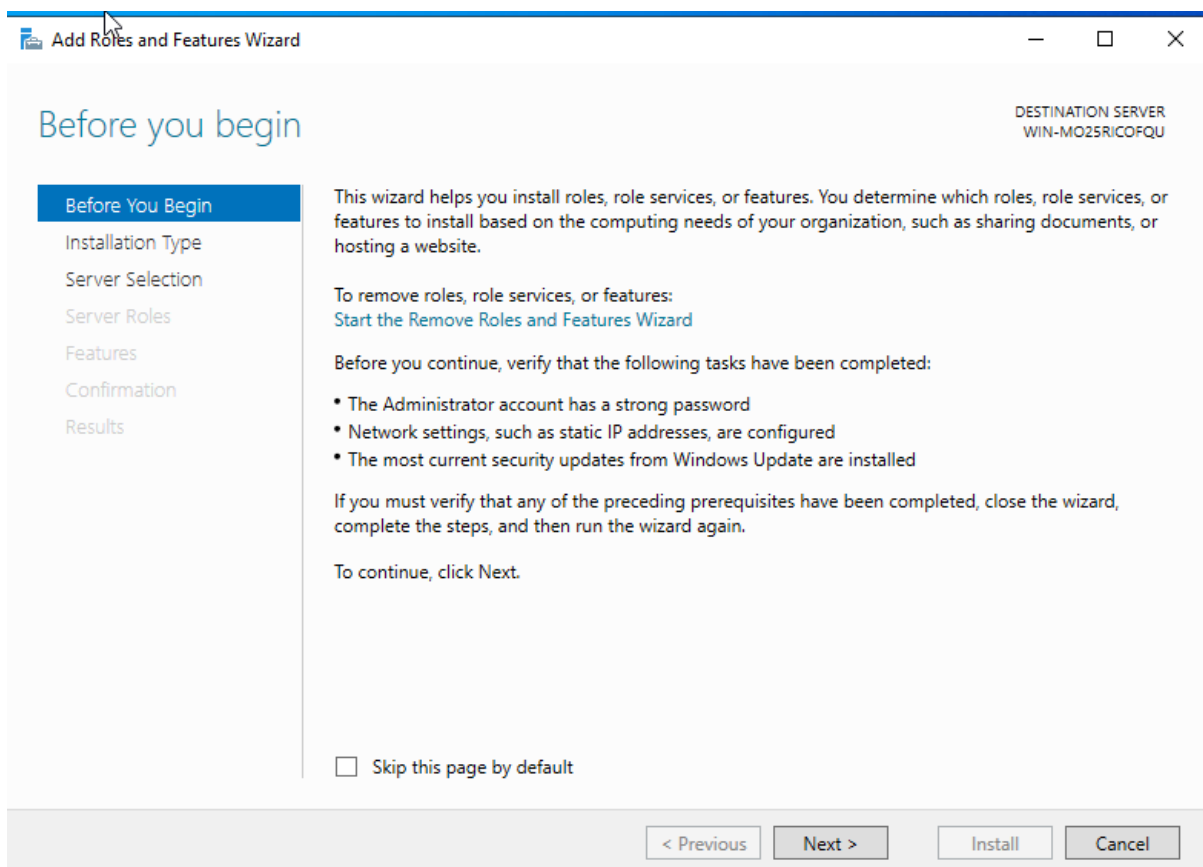

**Fig 1:** Open the Server Manager

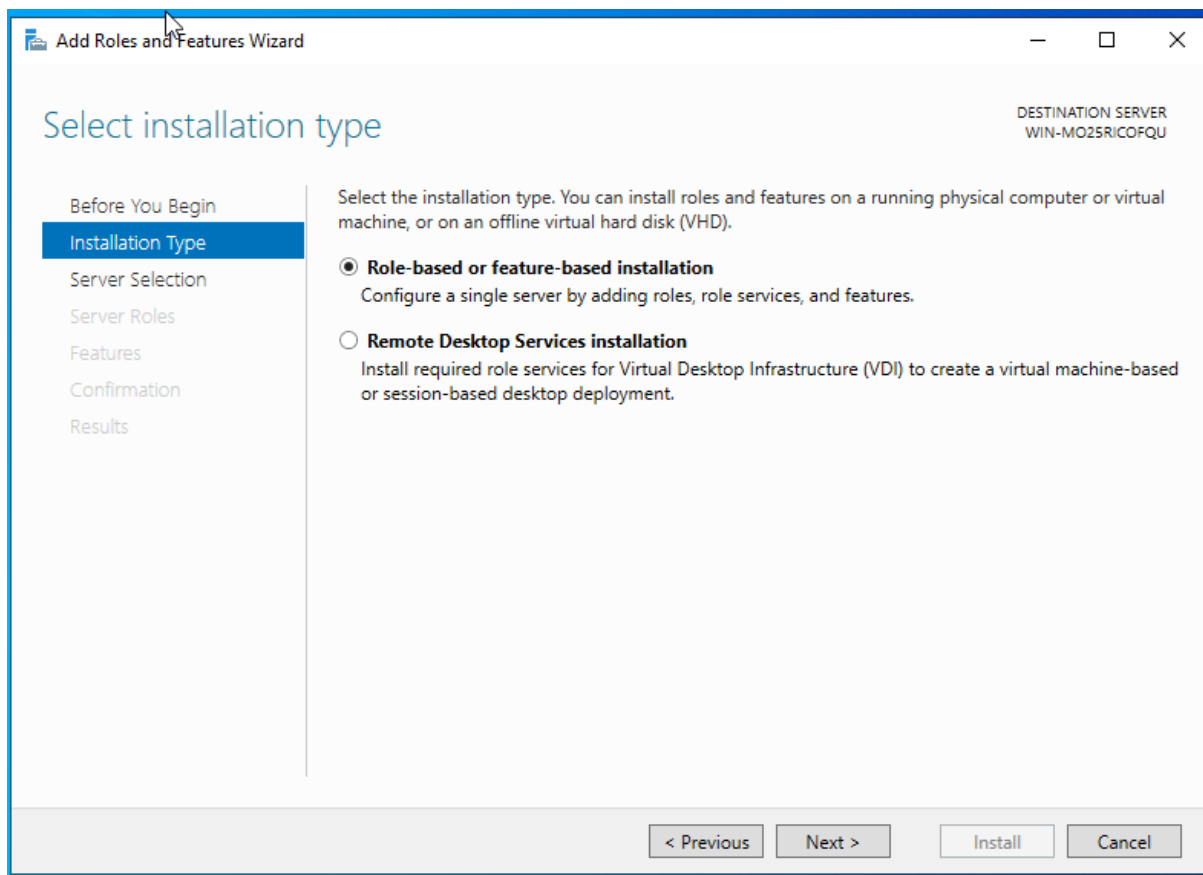

**Fig 2:** Navigate to Manage tab and select **Add Roles and Features**

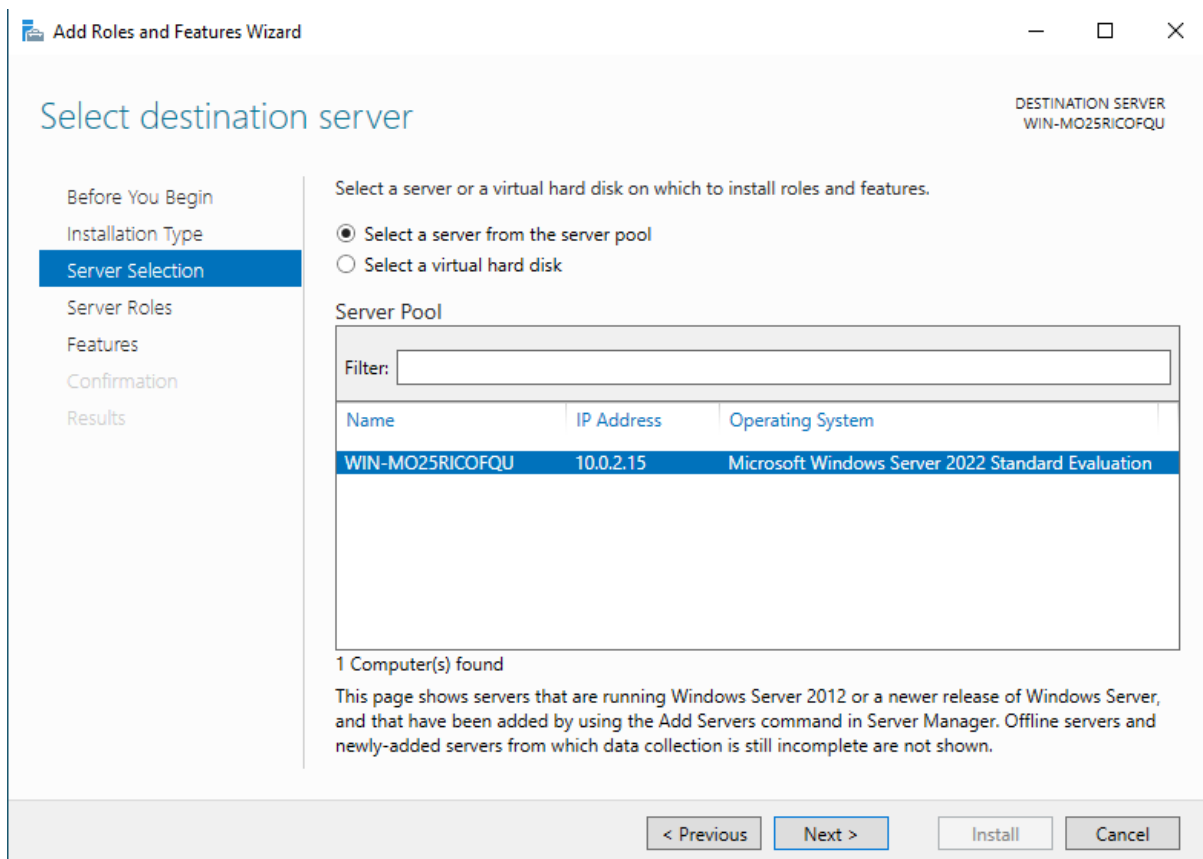

**Fig 3: Click Next**

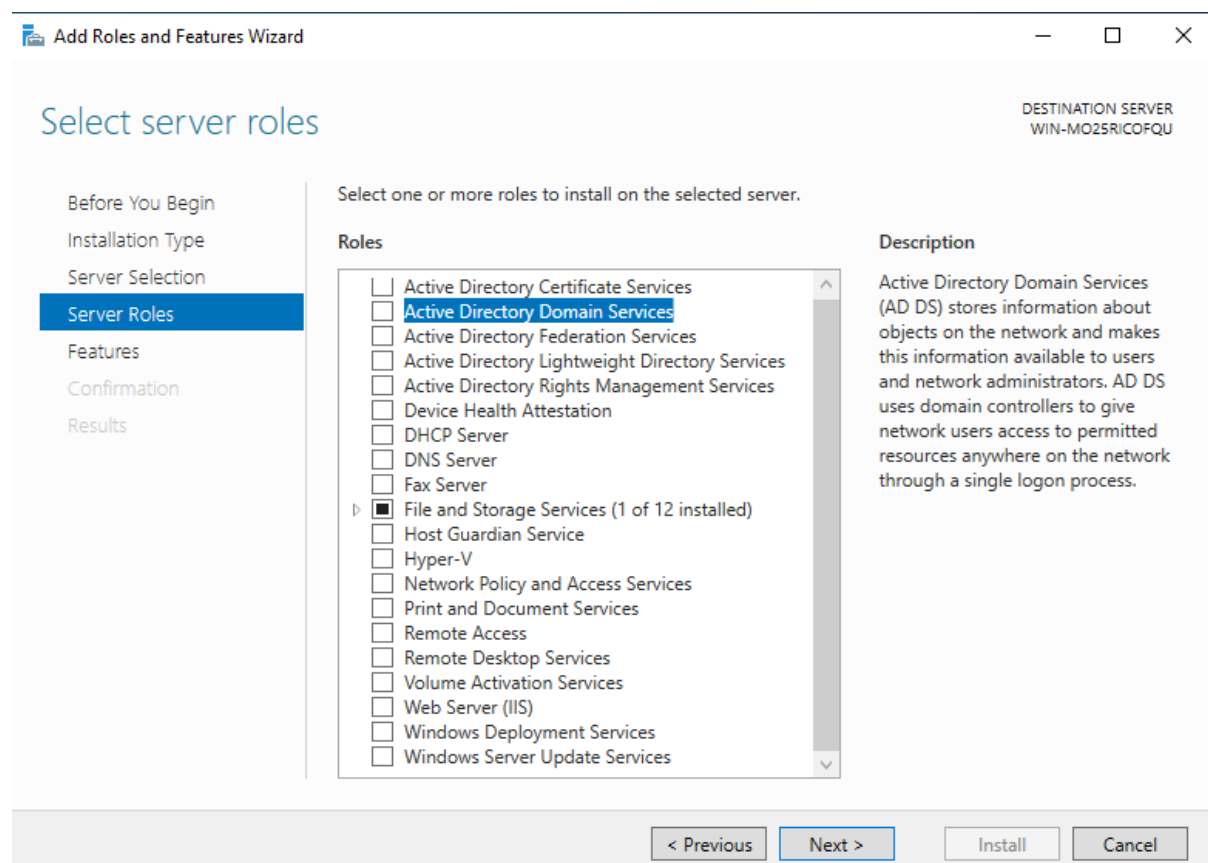

**Fig 4: Click Next**

**Fig 5:** Click Next

**Fig 6:** Click on the Active Directory Domain Service

**Fig 7:** Click Add Features.

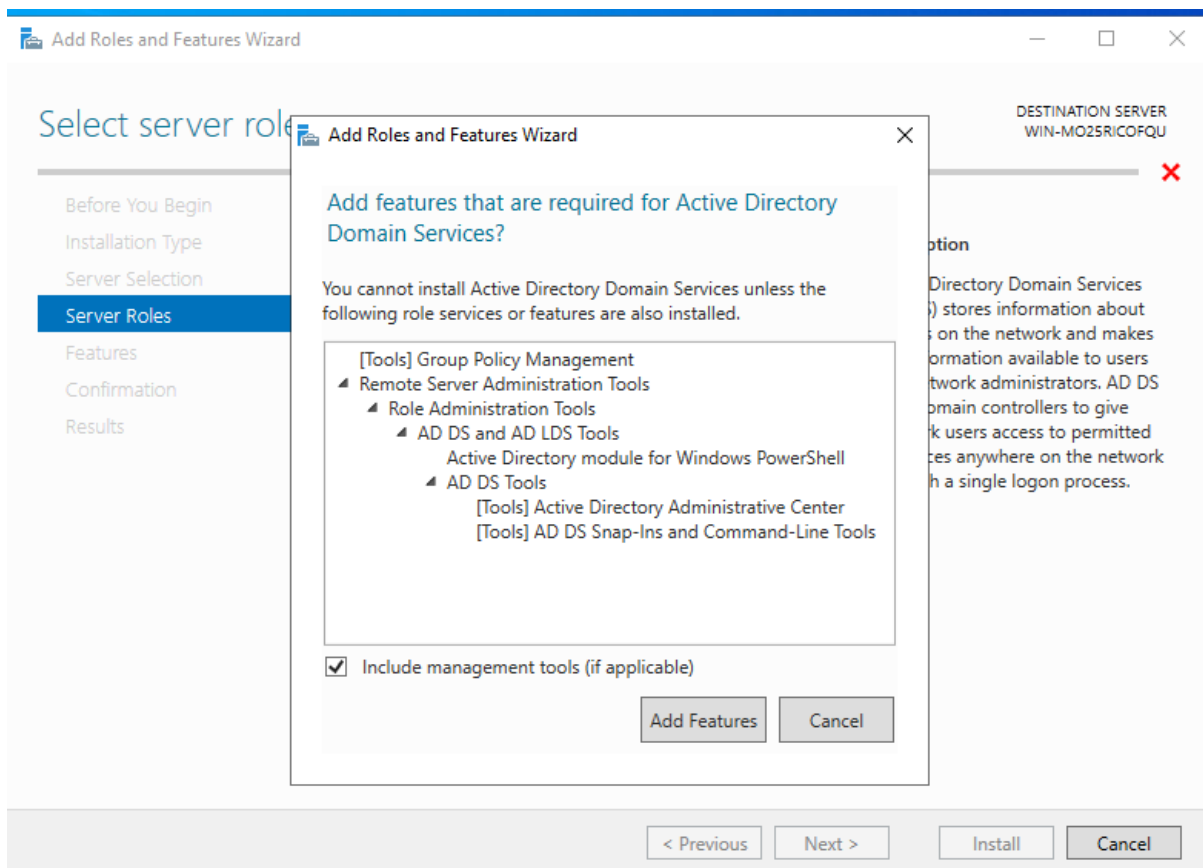

Fig 8: Click Next

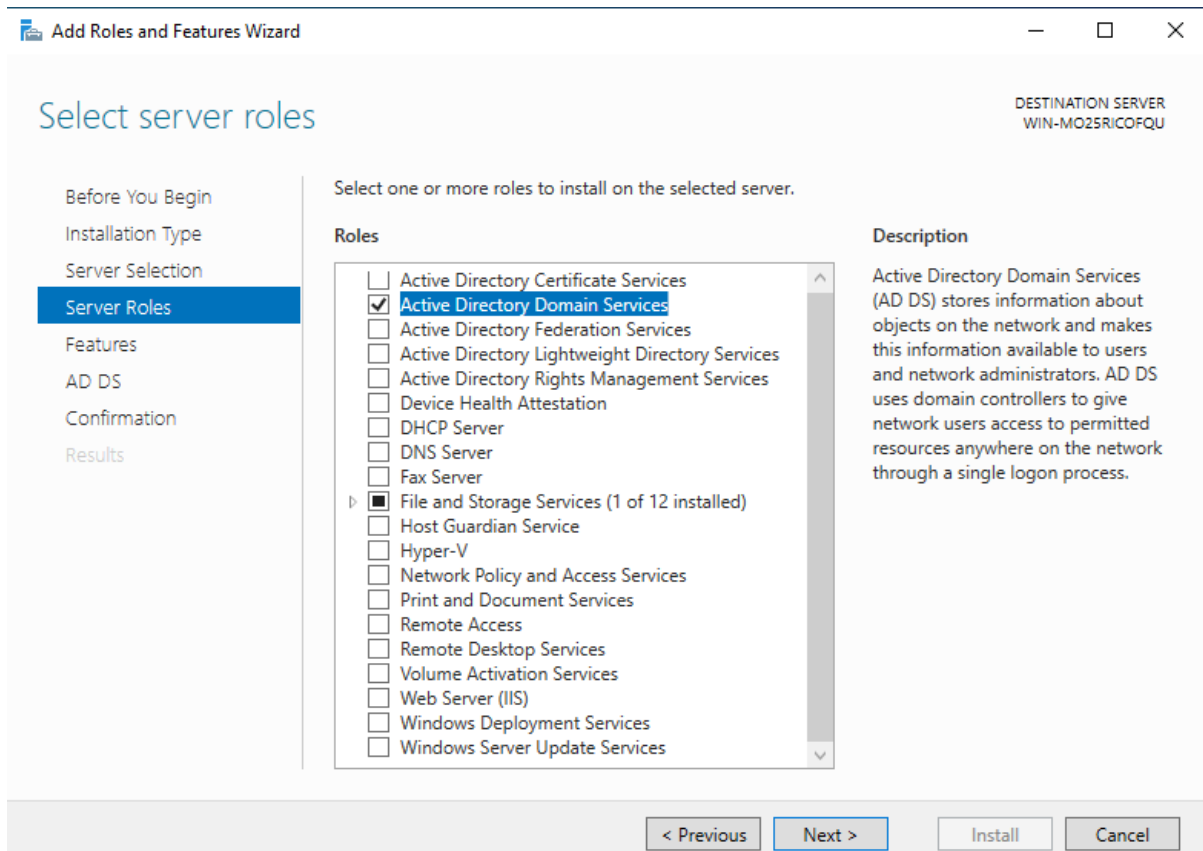

Fig 9: Click Next

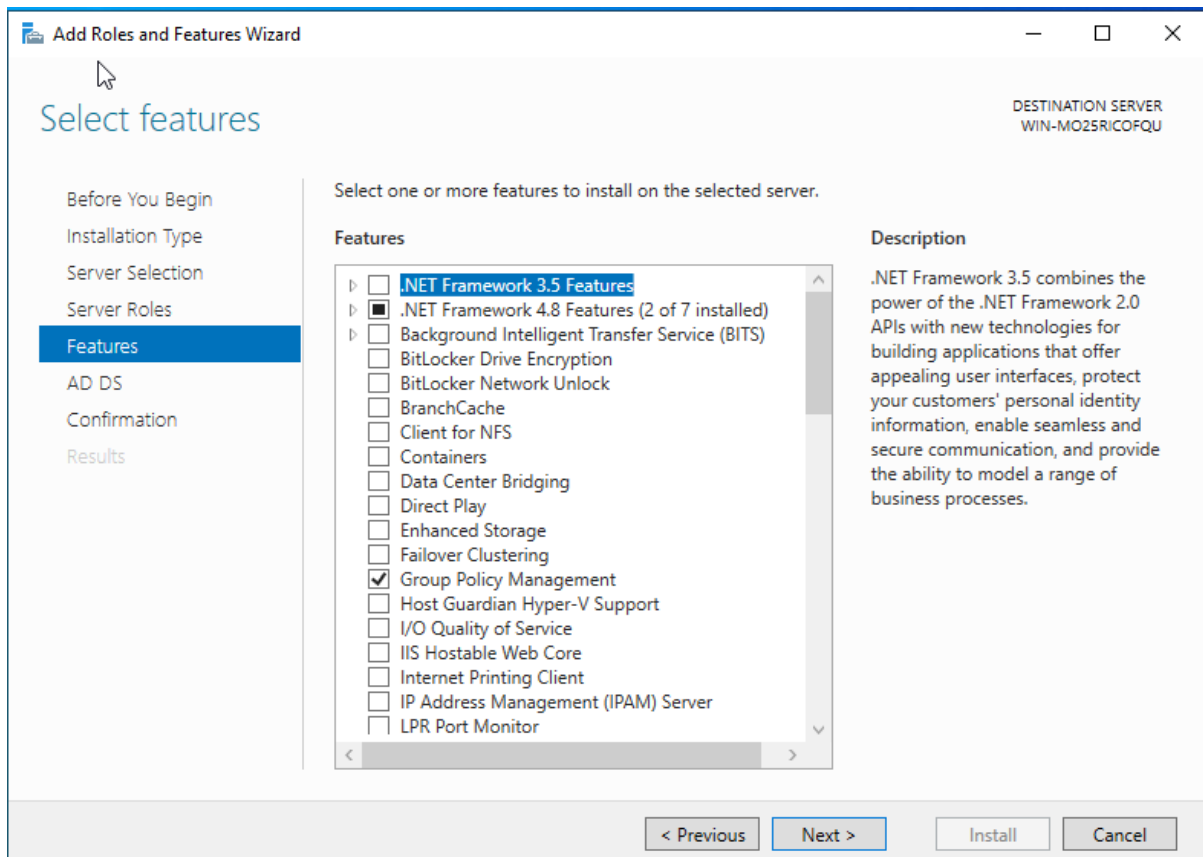

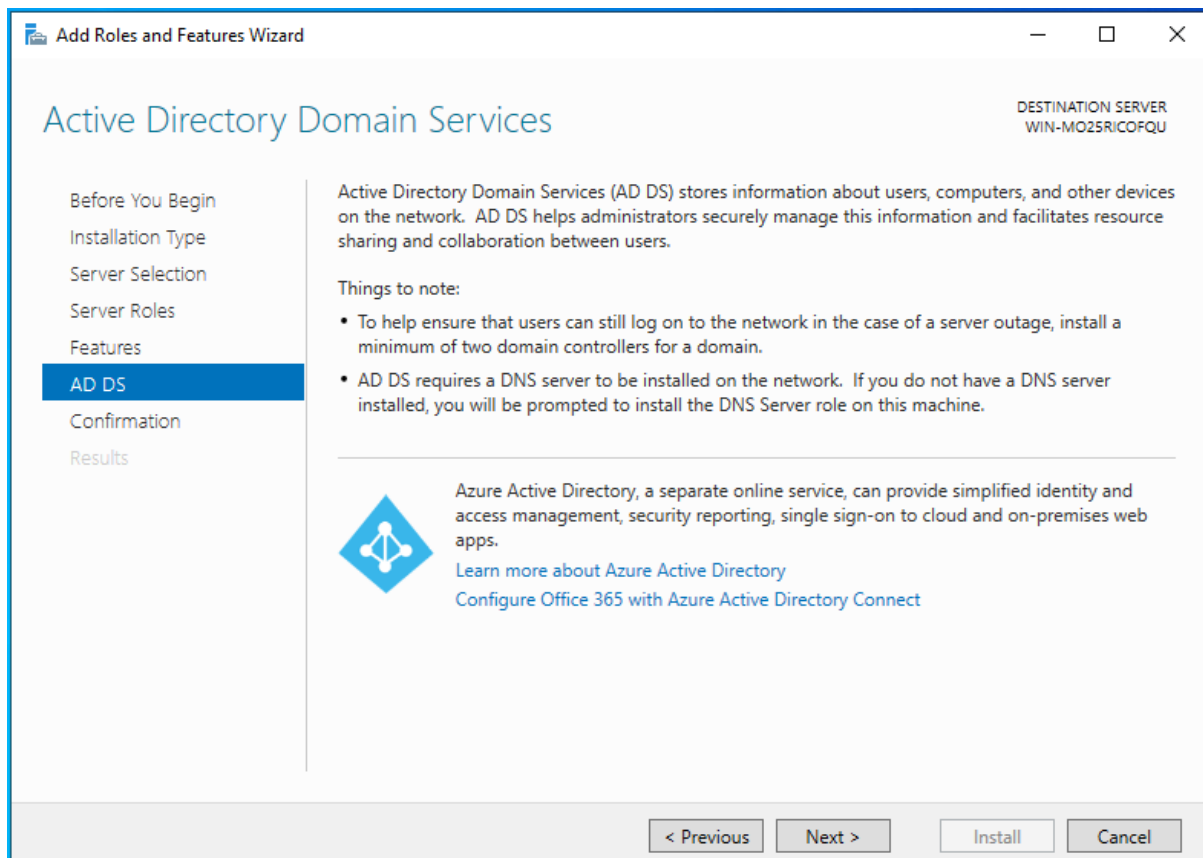

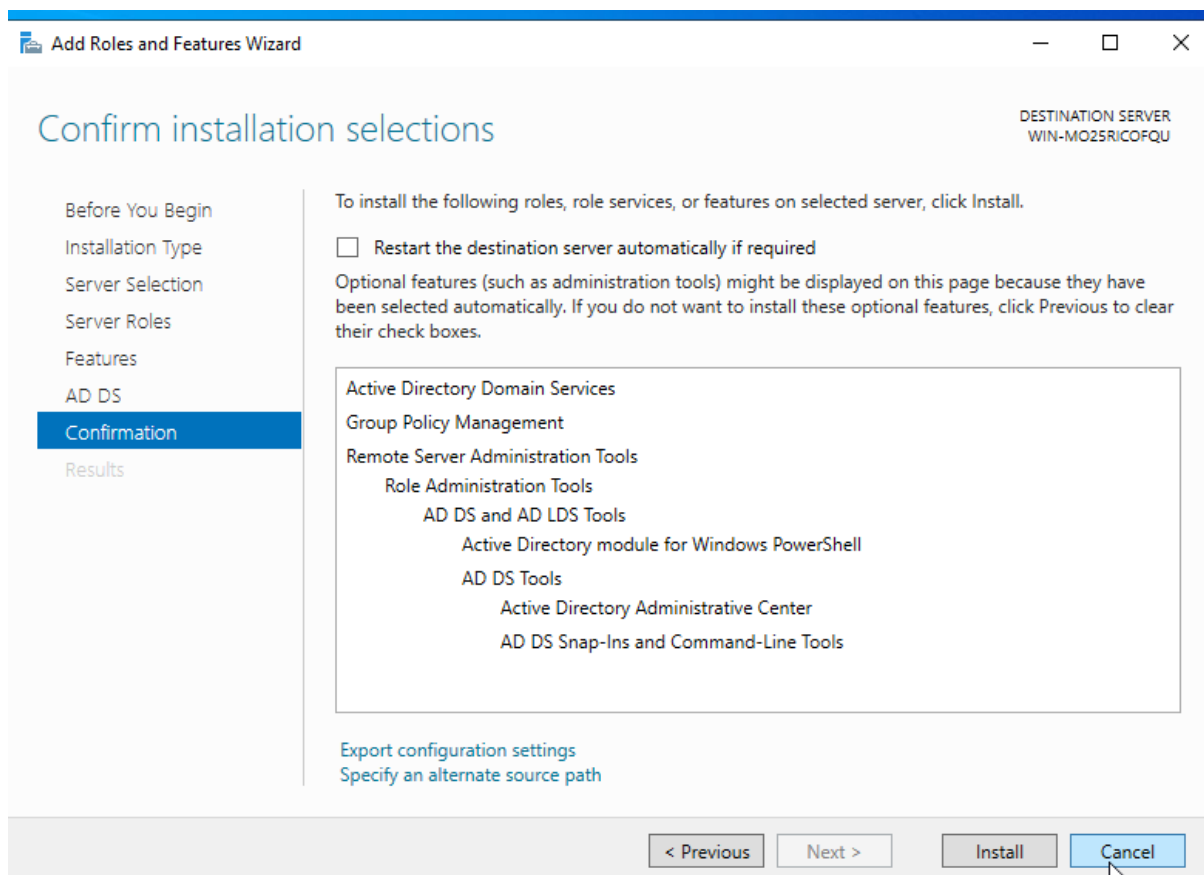

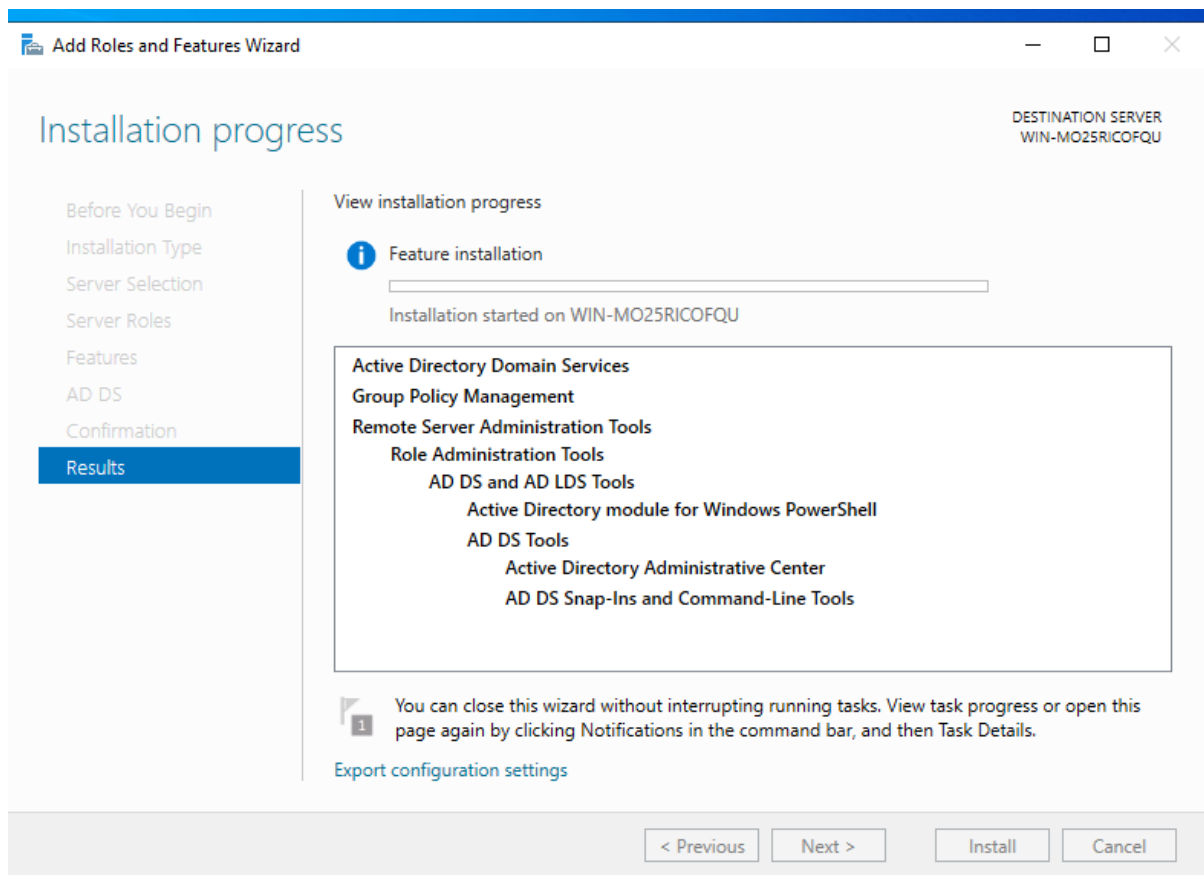

Fig 10: Click Next

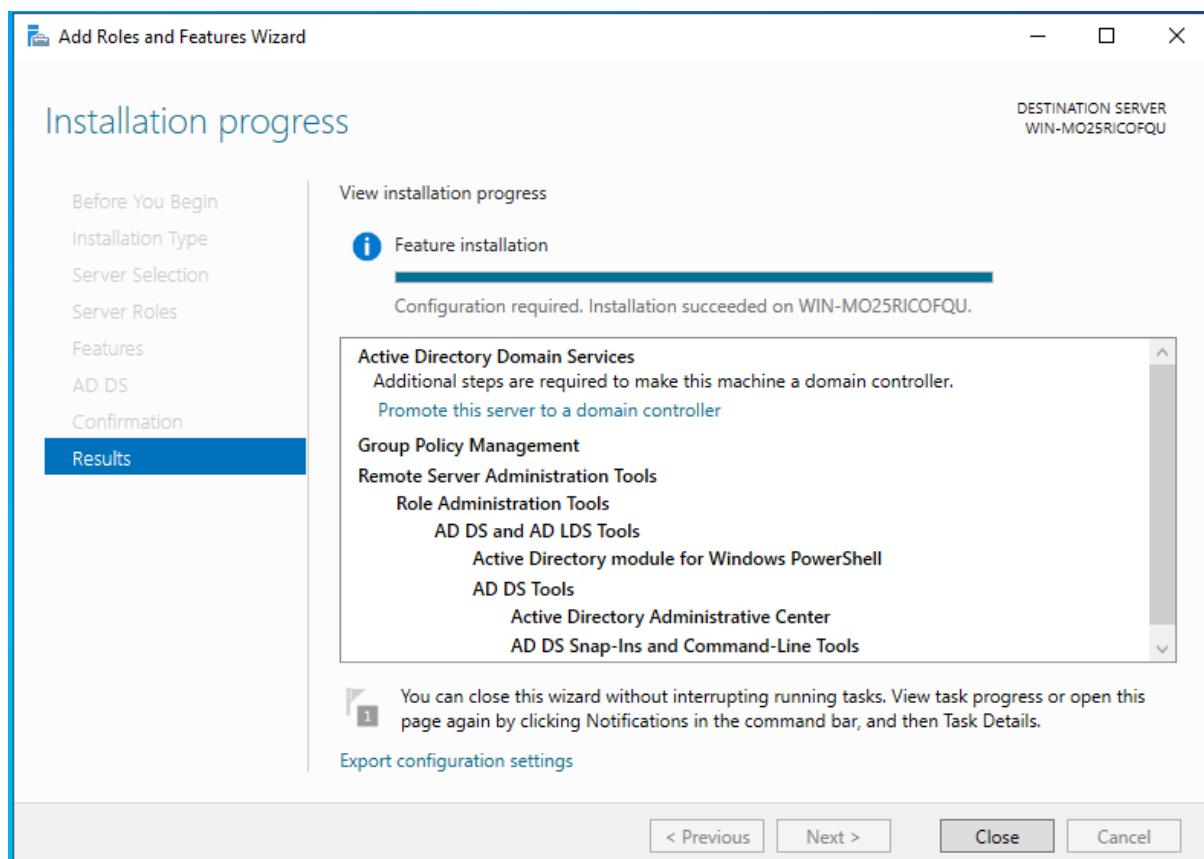

**Fig 11:** Click on Install

**Fig 12:** Installation in progress

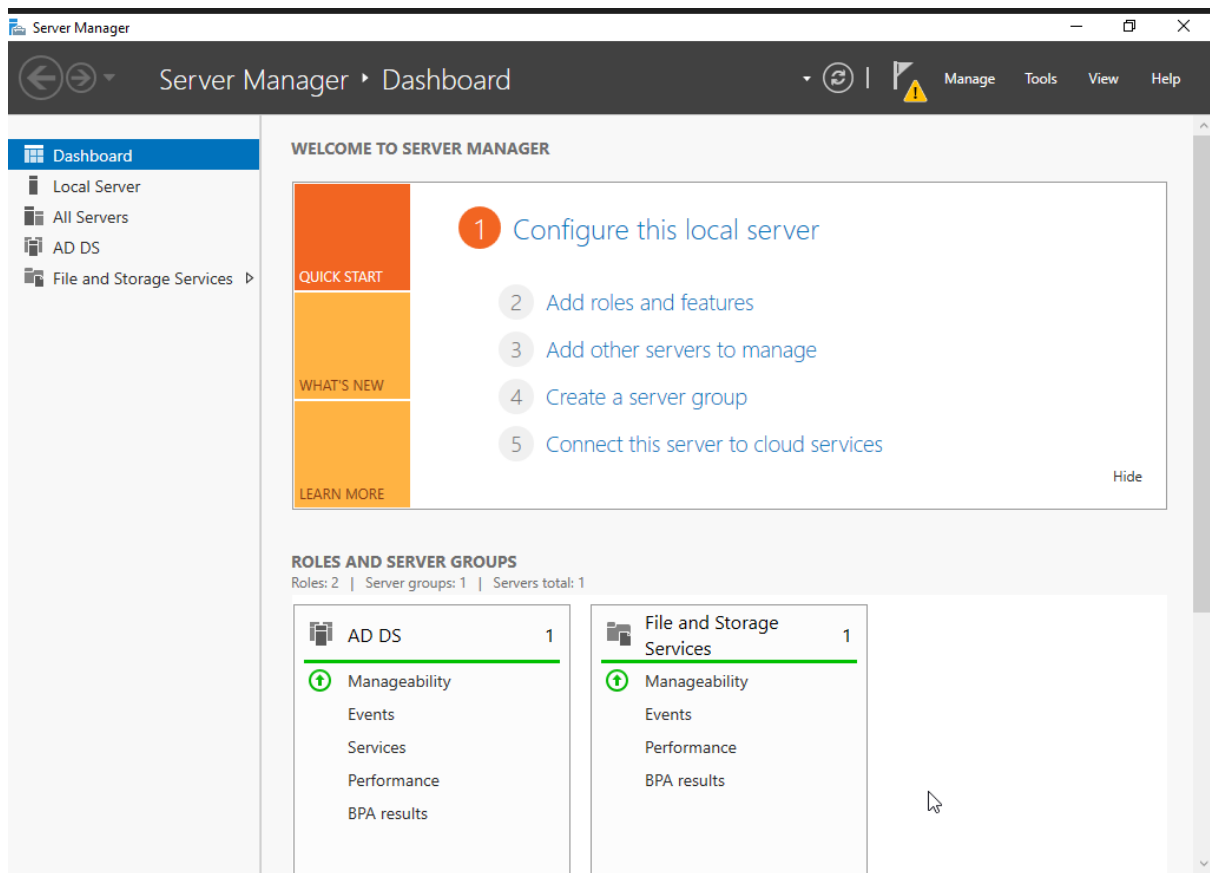

**Fig 13:** Installation completed

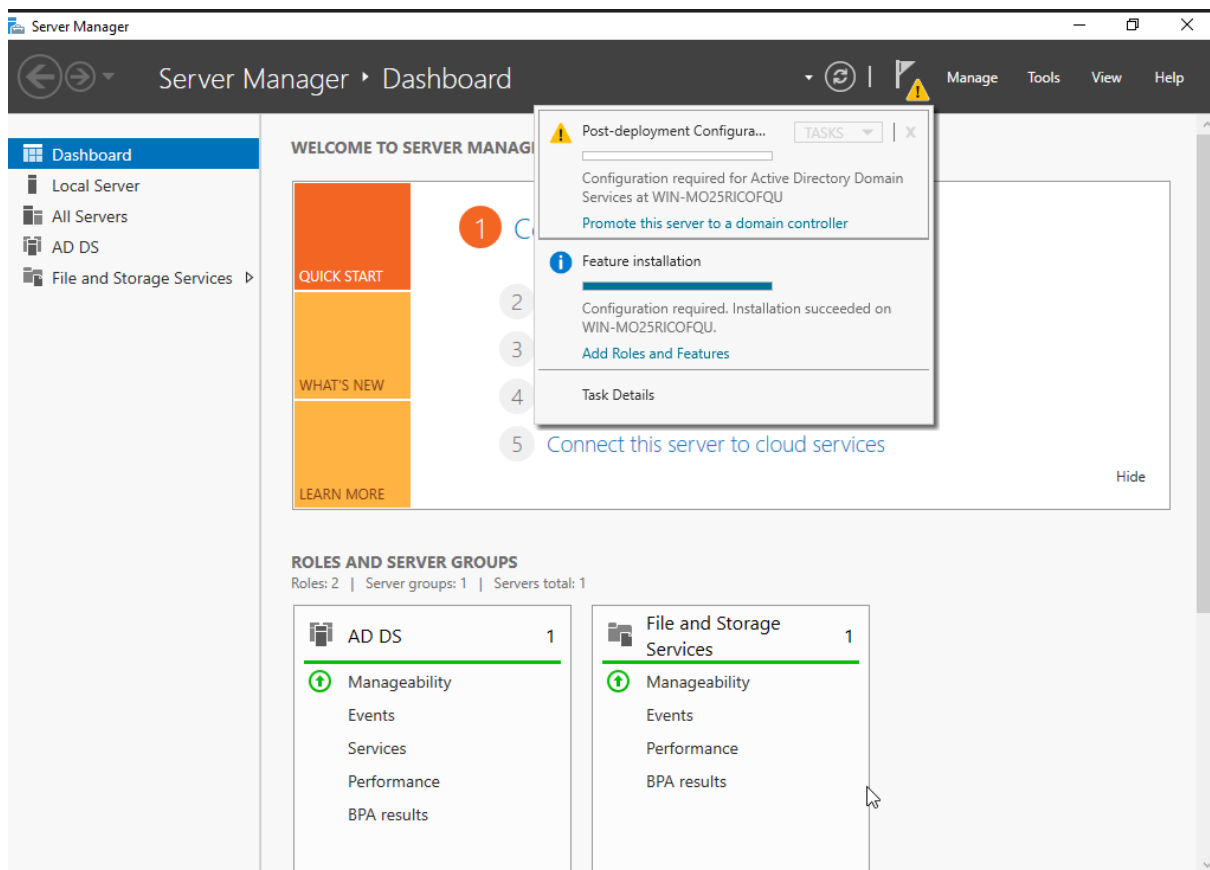

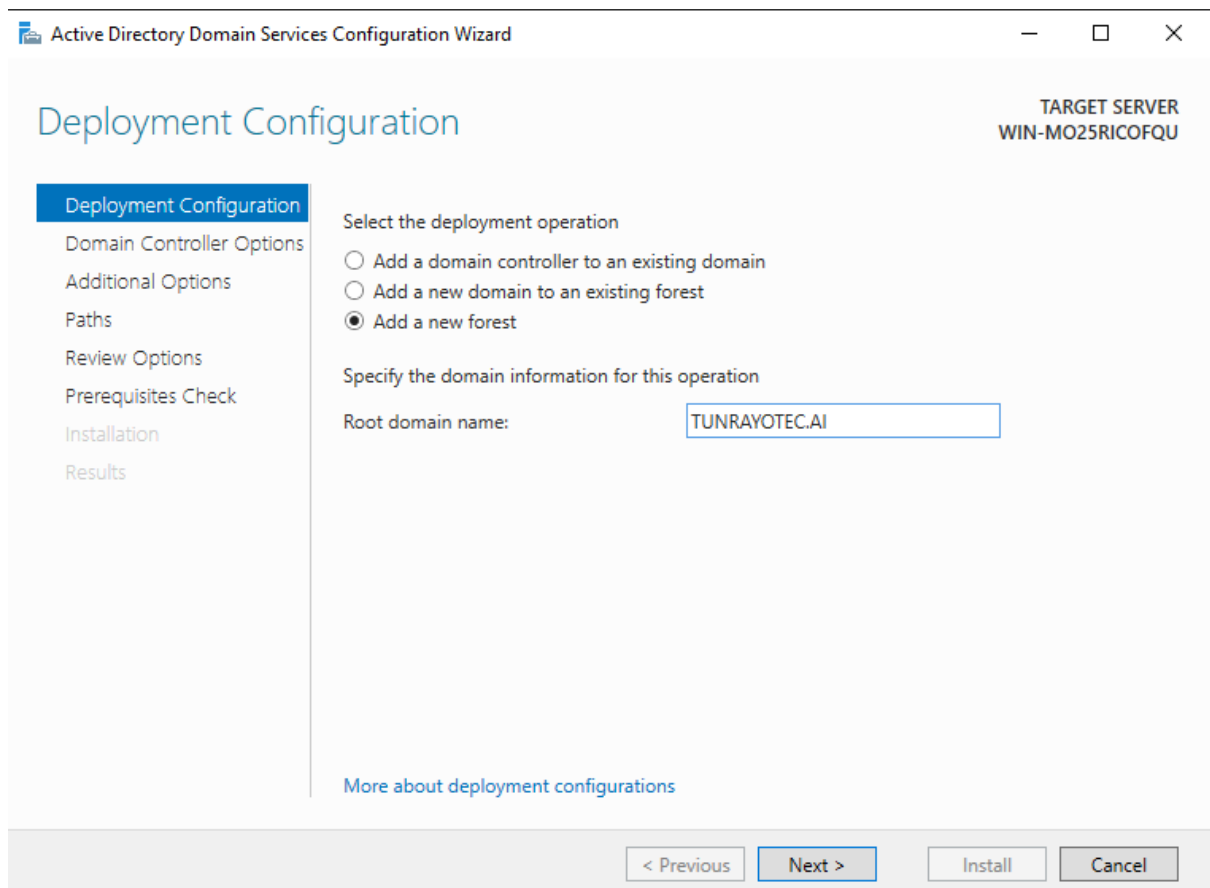

**Fig 14:** Click the notification icon by the Flag.

**Fig 15:** Post -deployment Configuration pop up displayed and click Promote this server to a domain controller.

**Fig 16:** Add a new forest, enter a Root domain name, and click Next.

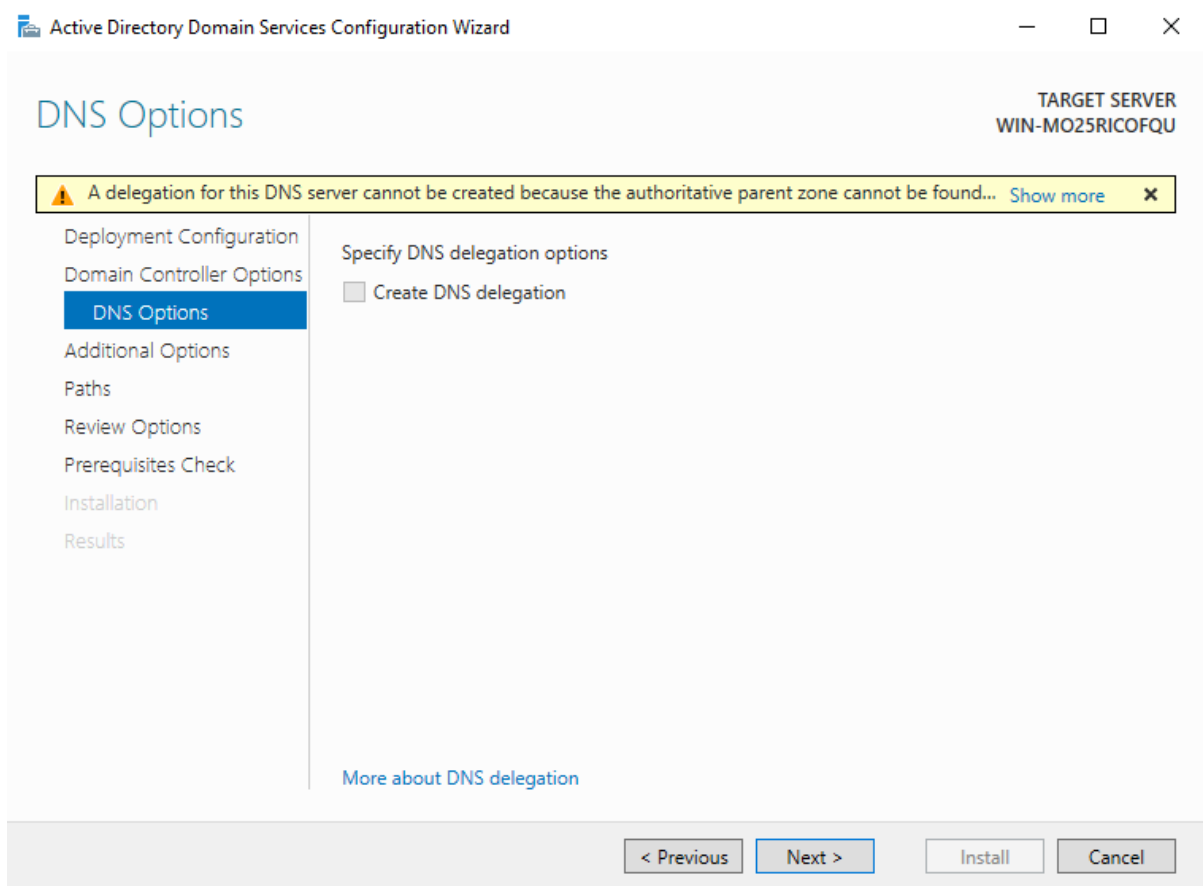

**Fig 17:** Enter password and click Next.

The screenshot shows the 'Active Directory Domain Services Configuration Wizard' window. The title bar includes the application name and standard window controls. The main content area is titled 'Domain Controller Options' and shows the 'TARGET SERVER' as 'WIN-MO25RICOFQU'. A left-hand navigation pane lists steps: 'Deployment Configuration', 'Domain Controller Options' (highlighted), 'DNS Options', 'Additional Options', 'Paths', 'Review Options', 'Prerequisites Check', 'Installation', and 'Results'. The main pane contains the following sections:

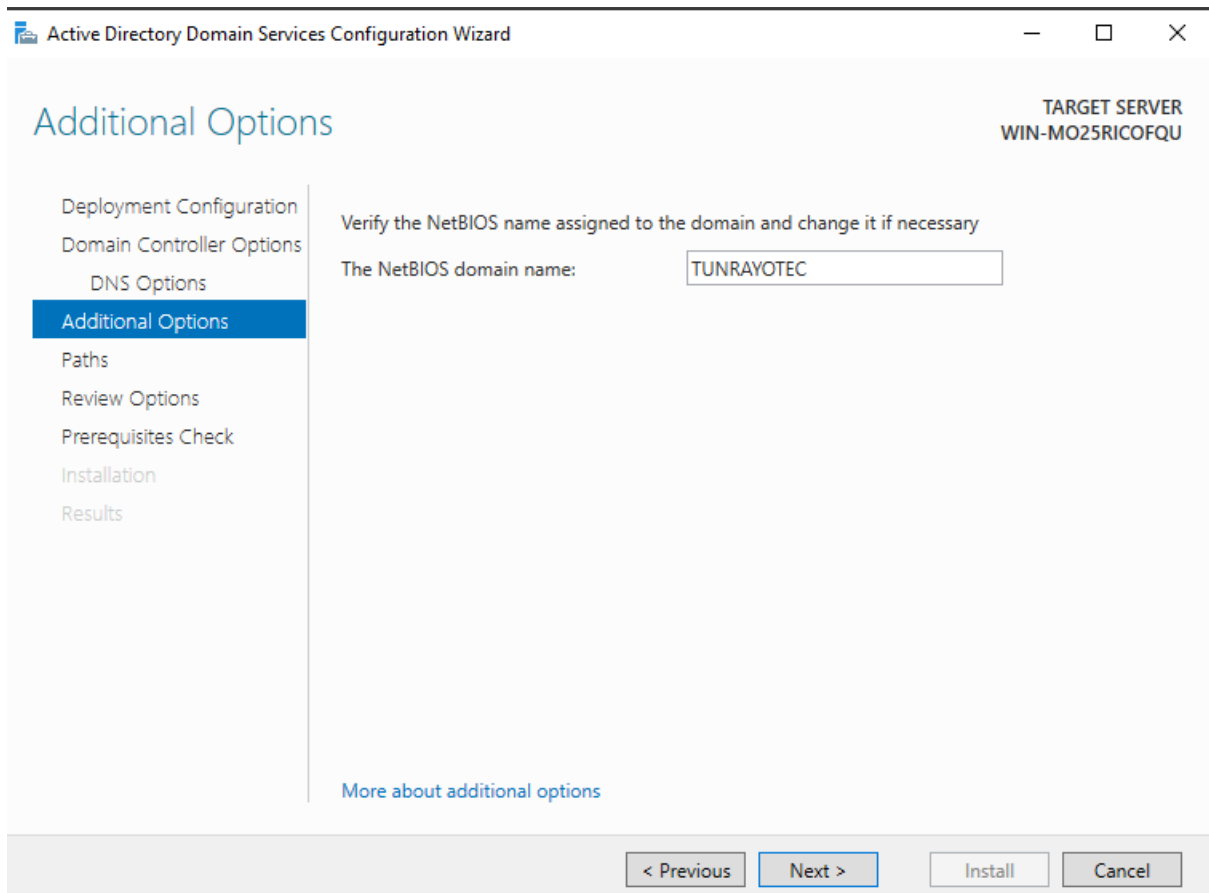

- Select functional level of the new forest and root domain:**
  - Forest functional level: Windows Server 2016 (dropdown)
  - Domain functional level: Windows Server 2016 (dropdown)
- Specify domain controller capabilities:**
  - ☒ Domain Name System (DNS) server
  - ☒ Global Catalog (GC)
  - ☐ Read only domain controller (RODC)
- Type the Directory Services Restore Mode (DSRM) password:**
  - Password: [text box with red asterisk]
  - Confirm password: [text box with red asterisk]

At the bottom of the main pane is a link: [More about domain controller options](#). The bottom of the window features a navigation bar with four buttons: '< Previous', 'Next >', 'Install', and 'Cancel'.

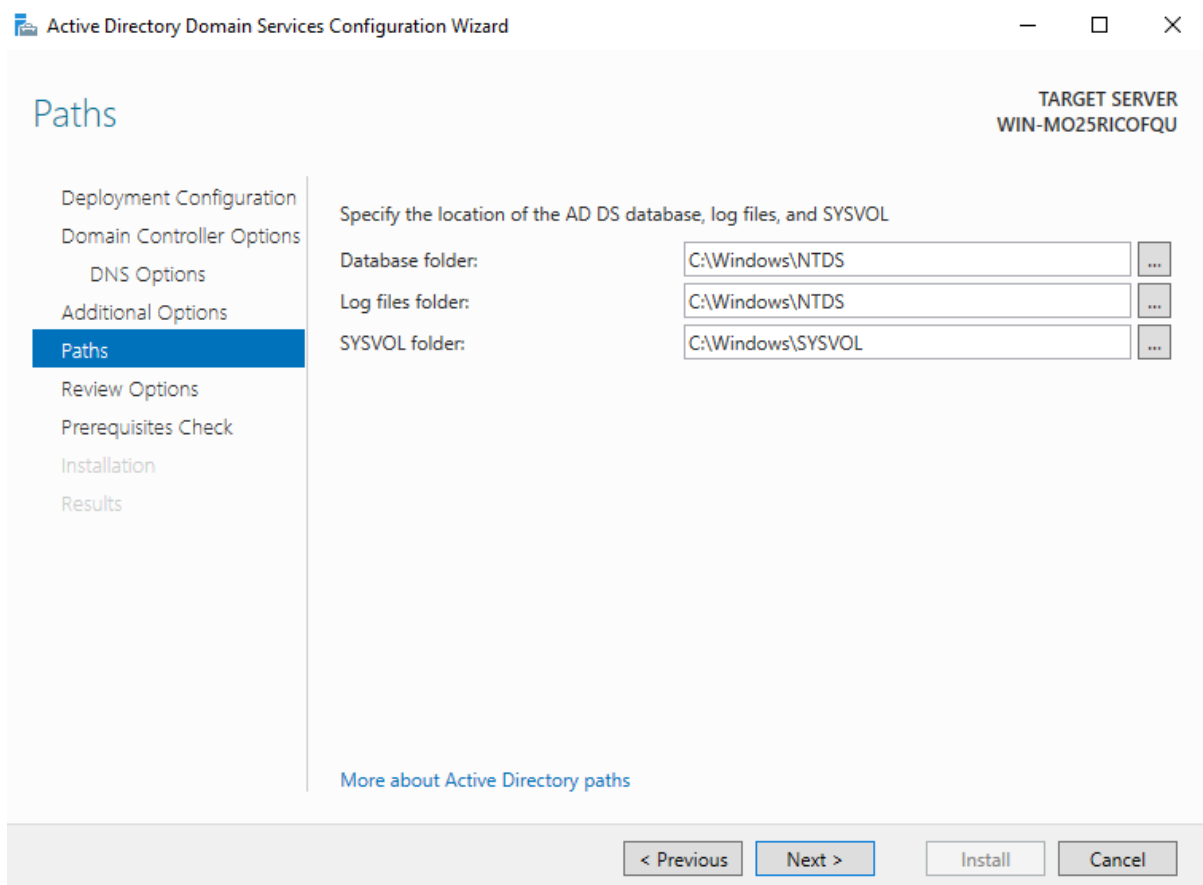

**Fig 18:** Click Next

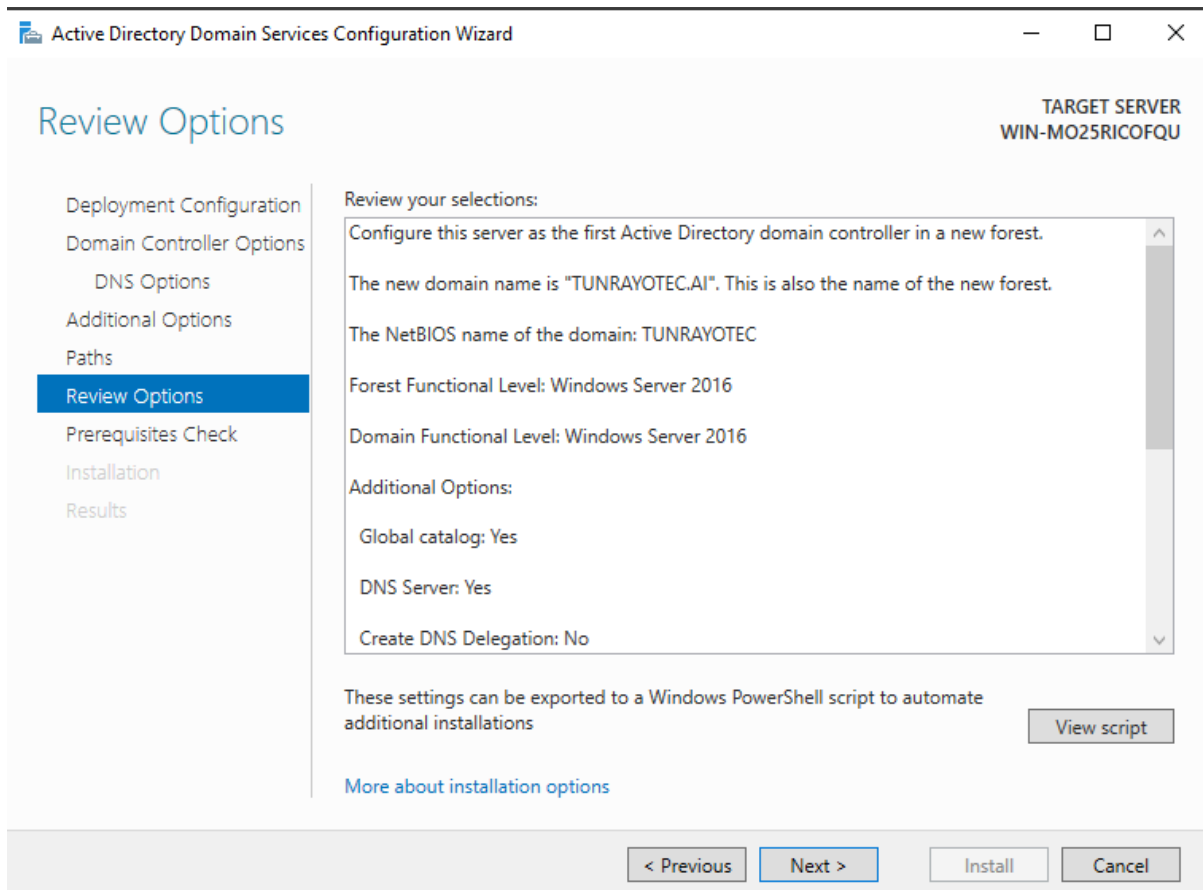

**Fig 19:** Click Next and by default the Domain Name is populated.

**Fig 20:** Click Next

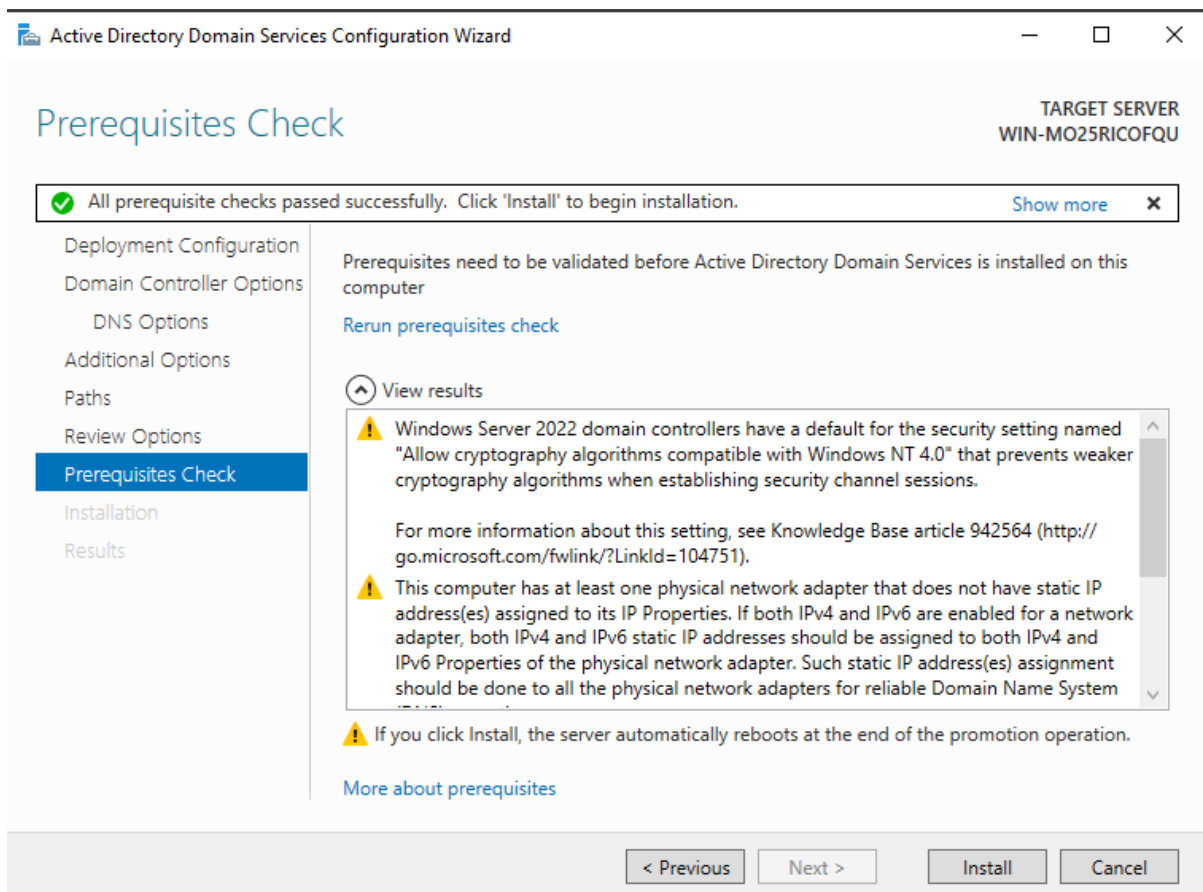

**Fig 21:** Click Next

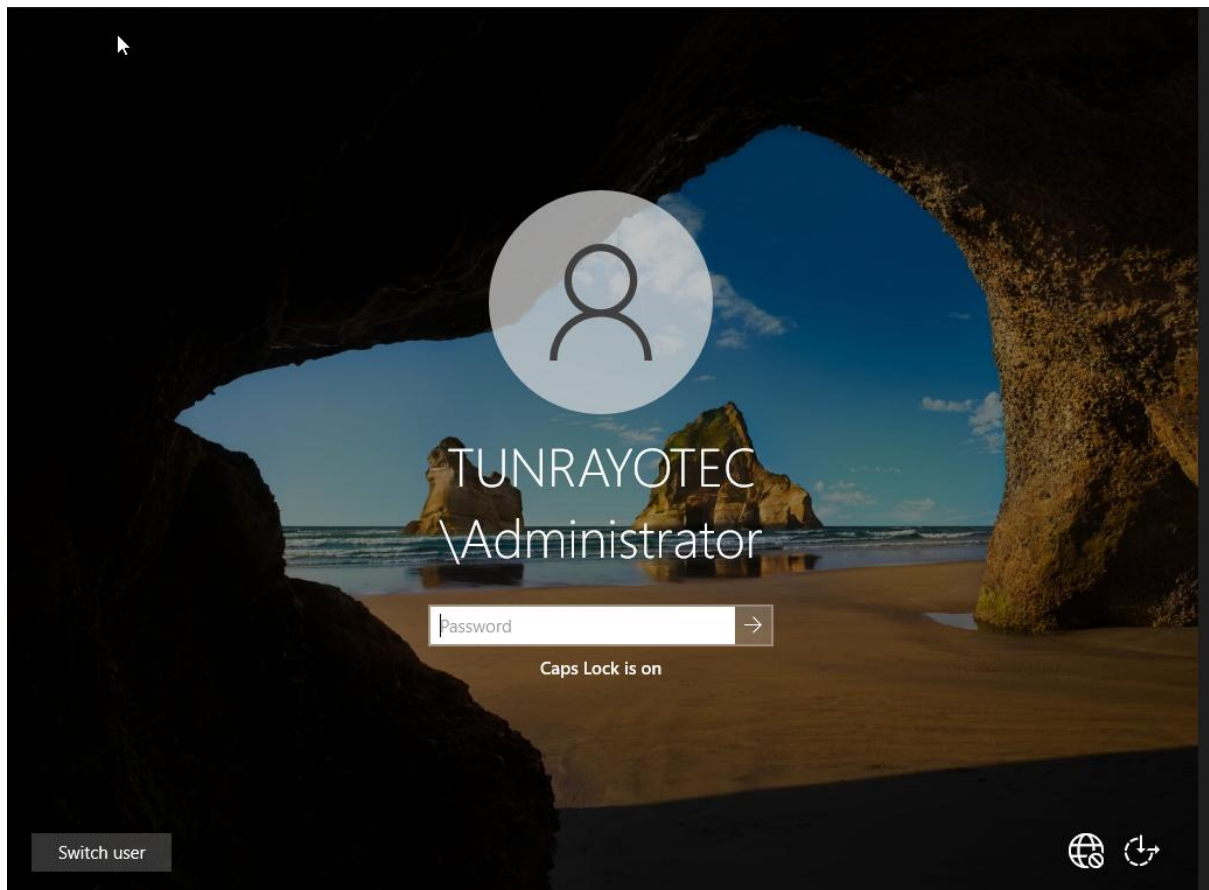

**Fig 22:** Click Next and click Install.

Note: After installation, the server will reboot automatically.

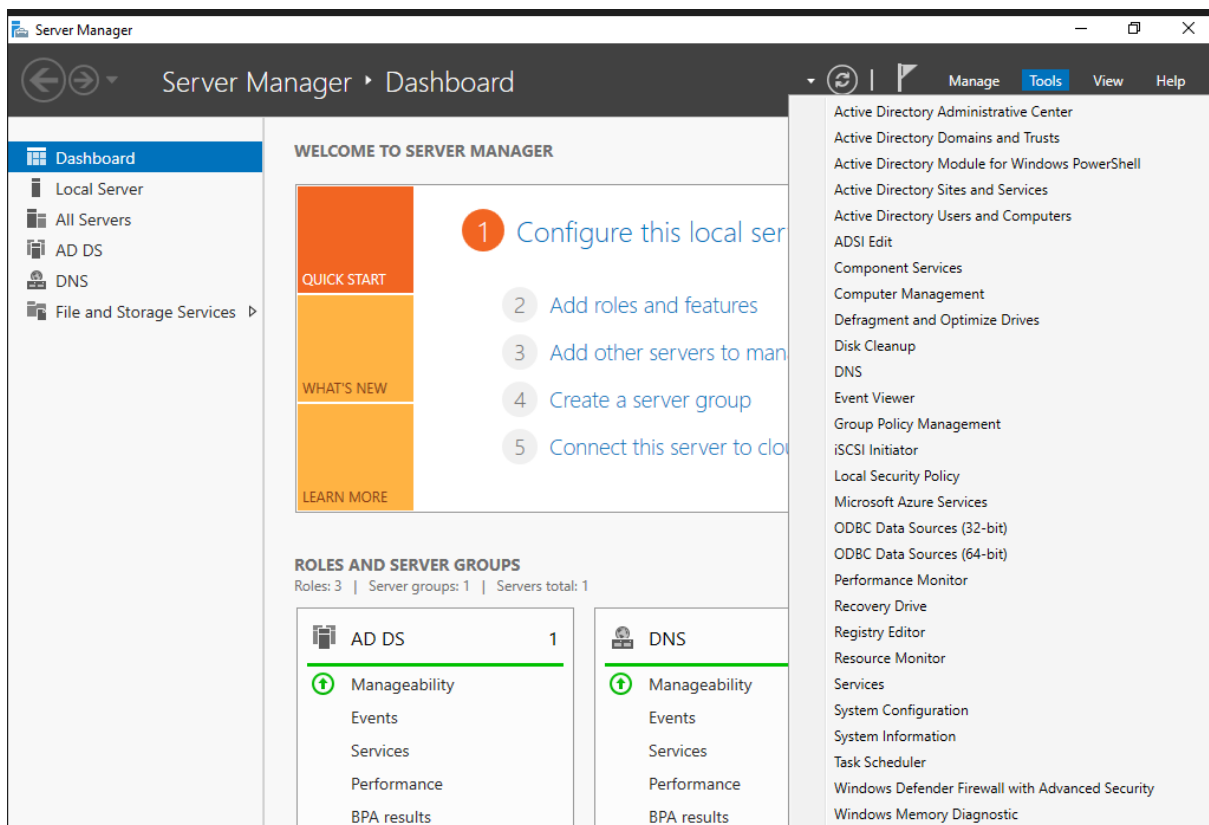

**Fig 23:**

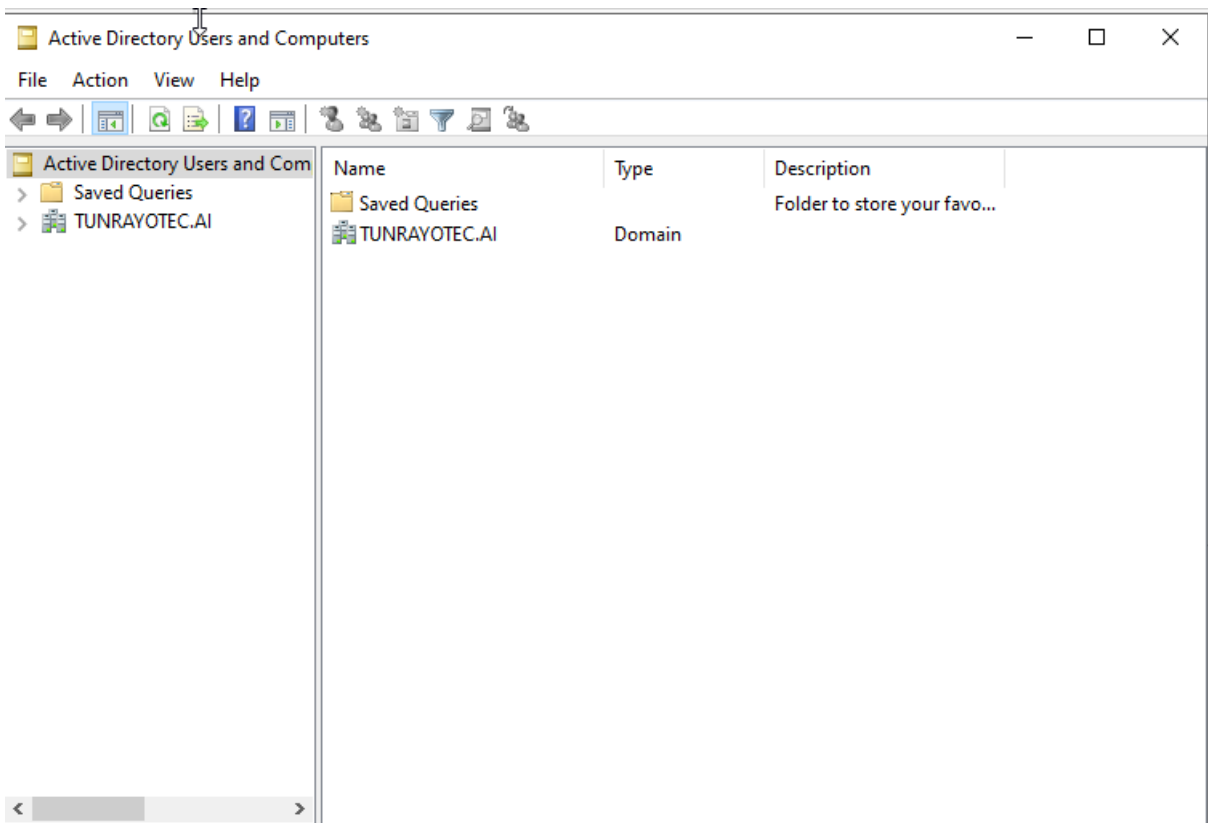

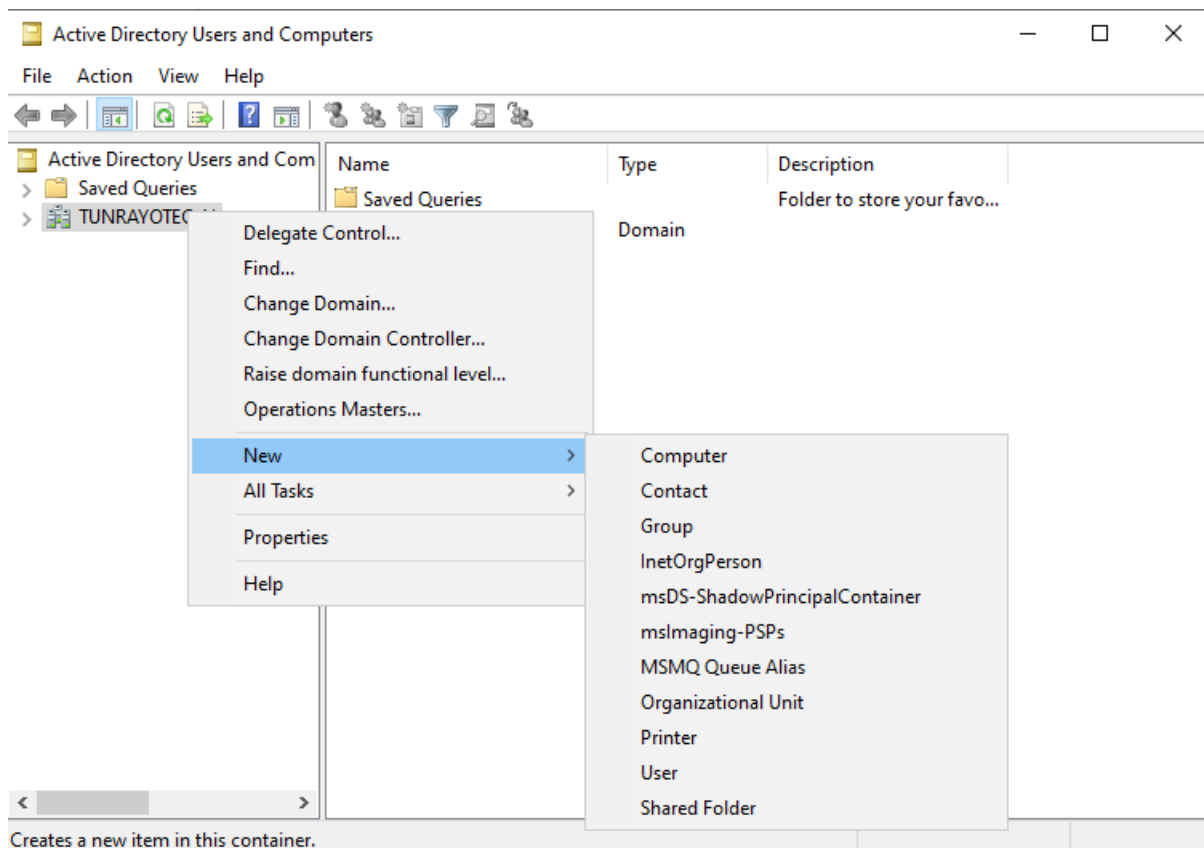

**Fig 24:** Navigate to Tools and select Active Directory Users and Computers

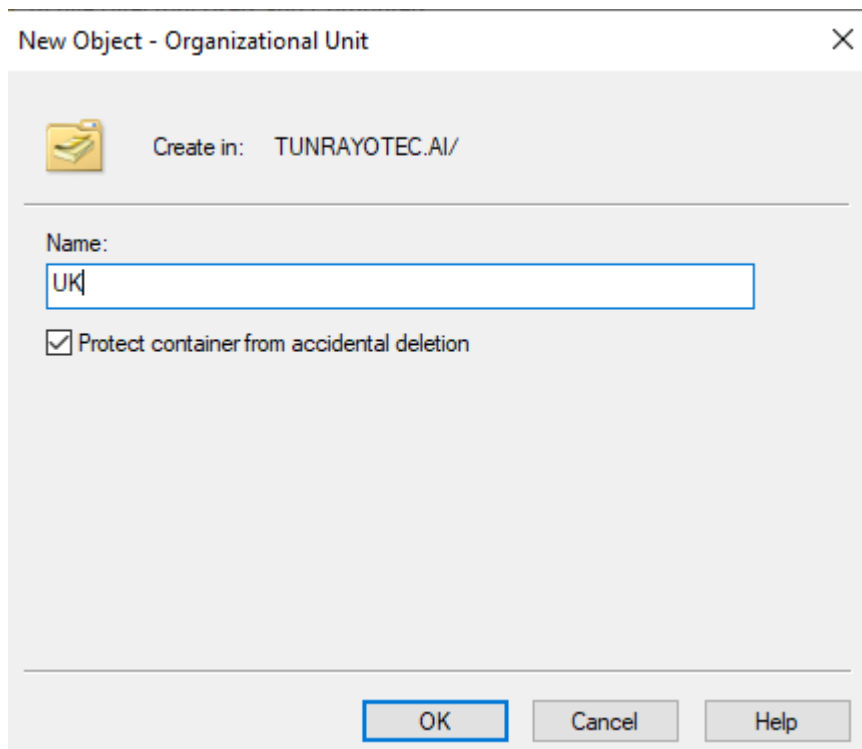

**Fig 25:** TUNRAYOTEC.AI Forest displayed, right click.

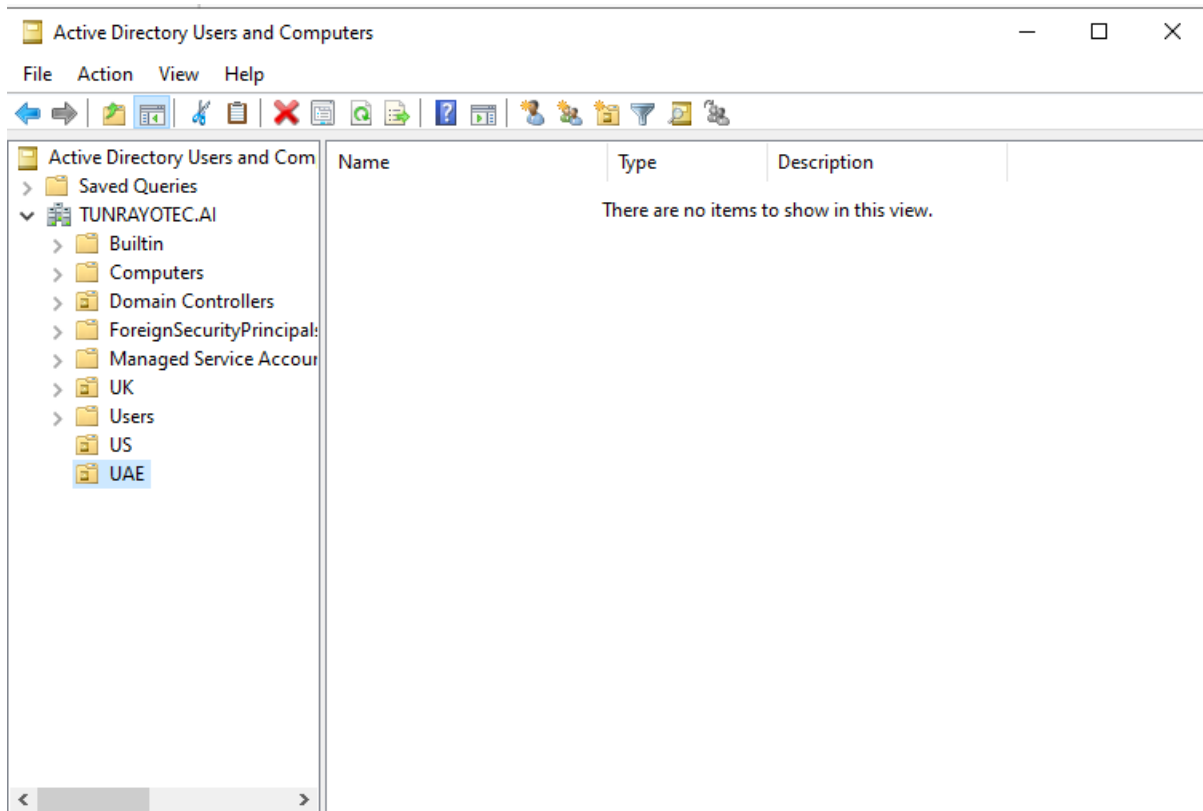

**Fig 26:** Click New and Organizational Unit

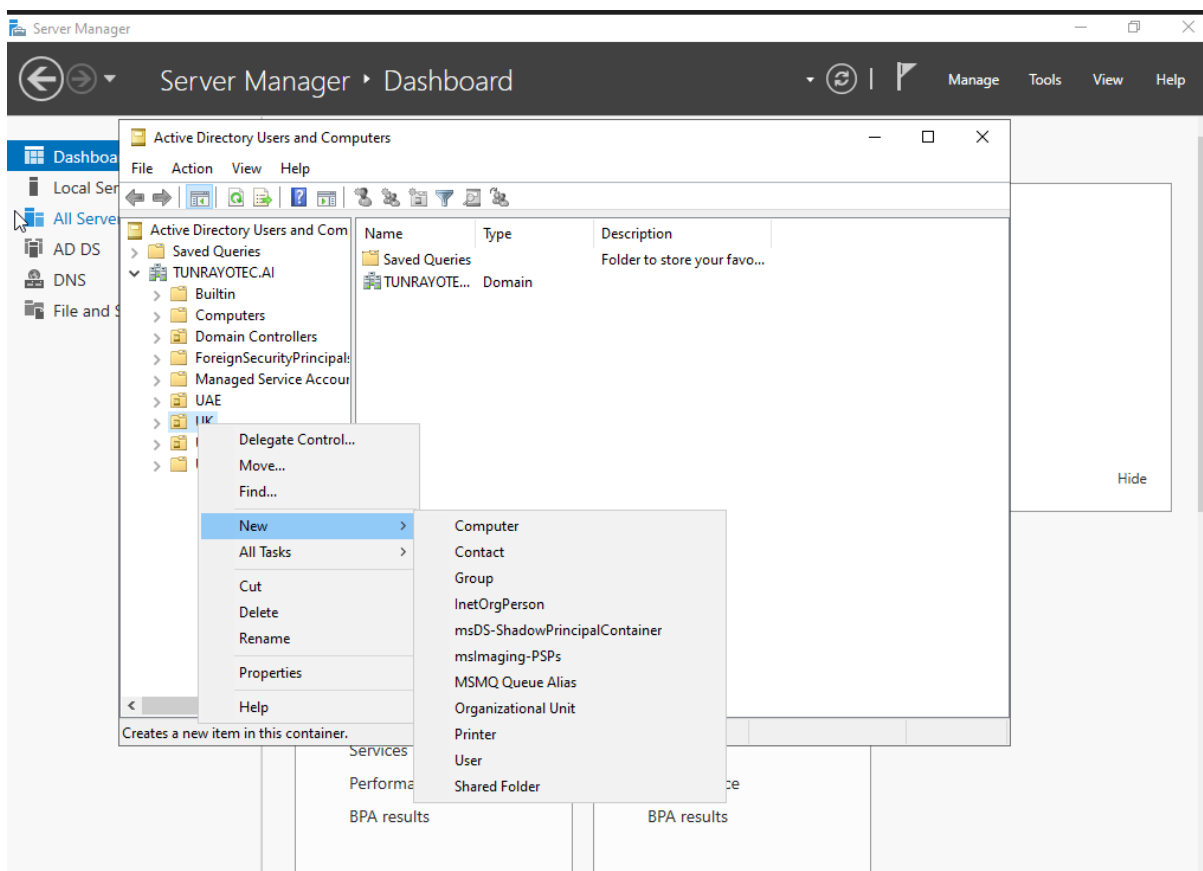

**Fig 27:** Create an Organisation Unit and check Protect container from accidental deletion.

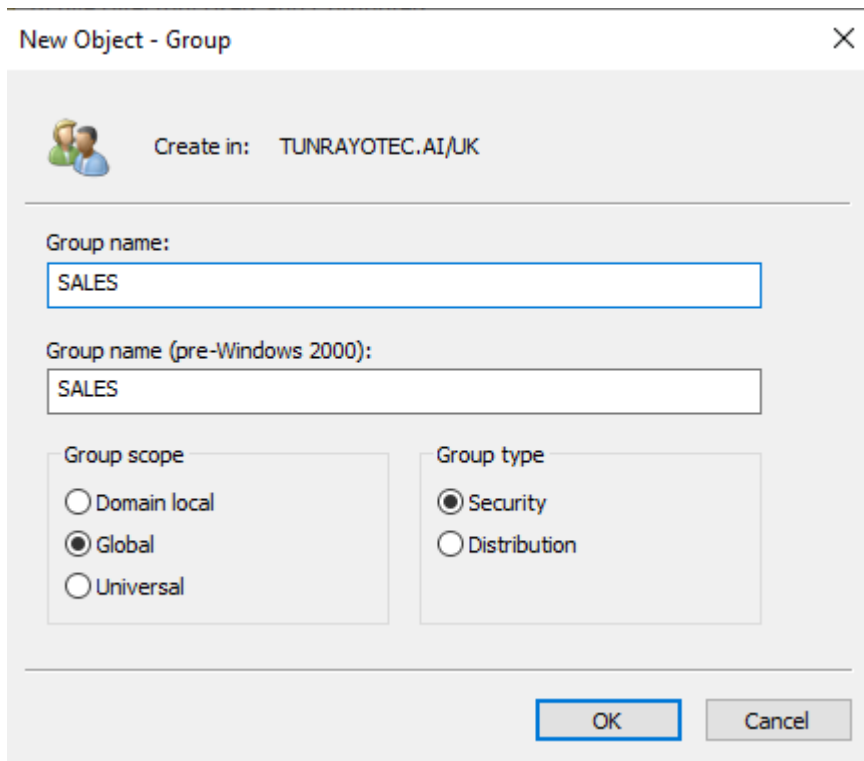

**Fig 28:**

**Fig 29:** Create Groups, navigate to the Organisation Unit, and right click>New> Group.

**Fig 30:** Enter the Group name and click OK.

New Object - Group

Create in: TUNRAYOTEC.AI/UK

Group name:  
SALES

Group name (pre-Windows 2000):  
SALES

Group scope

- ☐ Domain local
- ☒ Global
- ☐ Universal

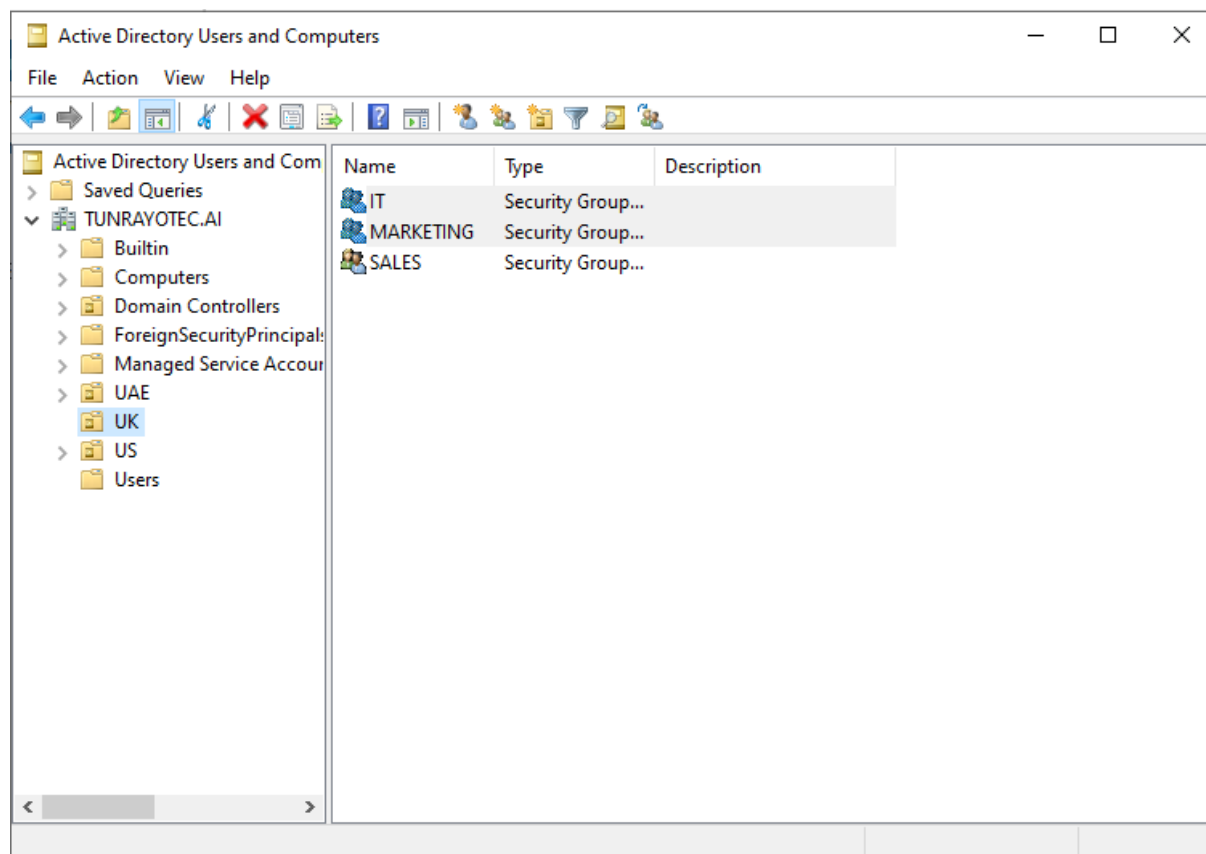

Group type

- ☒ Security
- ☐ Distribution

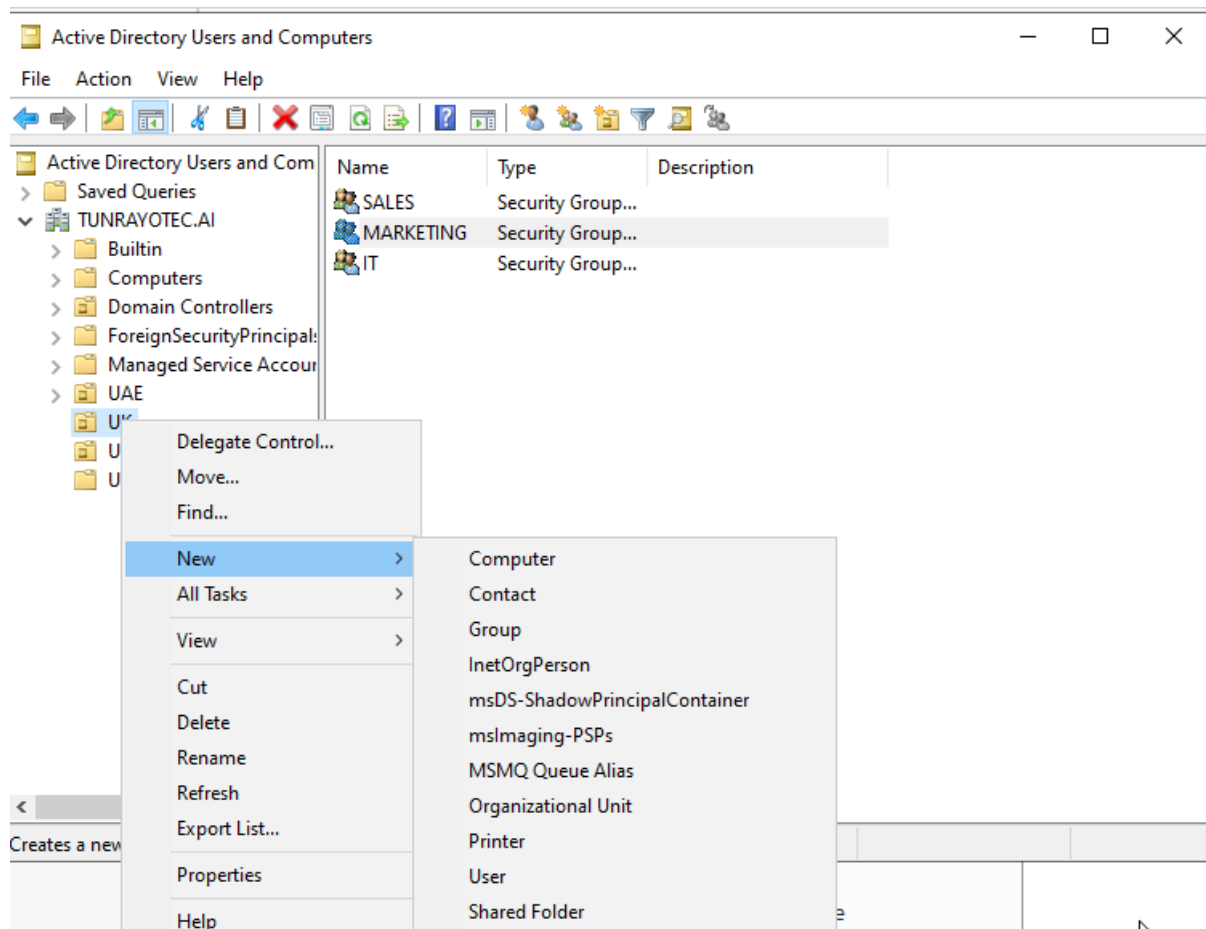

OK Cancel

**Fig 31:** Create the various groups needed in each Organisation Unit.

Note: Click on the Organisation Unit and on the right the various groups should be displayed as shown in the screen shot.

**Fig 32:** To create a user, click on the Organisation Unit, right click, select New and select User.

**Fig 33:** Enter the First name, Last name and enter the User logon name based on your company's policy.

Note: To prevent duplication ensure you use unique identifiers to differentiate users.

New Object - User ×

 Create in: TUNRAYOTEC.AI/UK

---

First name:  Initials:

Last name:

Full name:

User logon name:

User logon name (pre-Windows 2000):

**Fig 45 ©: Enter the**

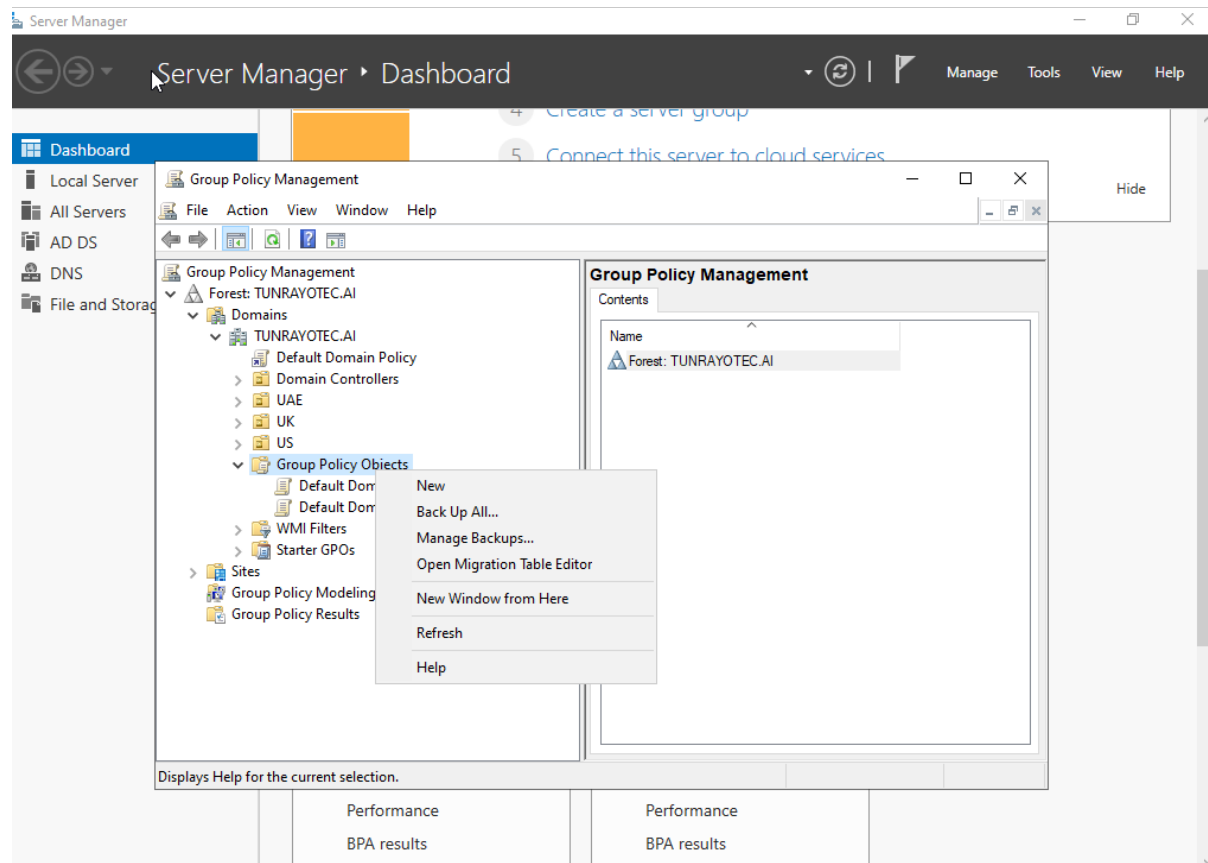

**Fig 45(d)**

**Fig 46 (a):** To configure Least Privilege permissions to a user, navigate to> the server>tools> group policy management>click>expand the Forest>expand the domain>group policy objects>right click on new>enter the name of the policy.

Note: This is to assign permissions to certain group, individual, or individuals. Take for example if we have ten members in the marketing team, it makes no logical reason to create policies for each a member is added to a group. The best and efficient way is to have a benchmark policy for diverse groups. In the event we have new employees, all we need to do is attach the relevant policies to them)

**Fig 46(b)**

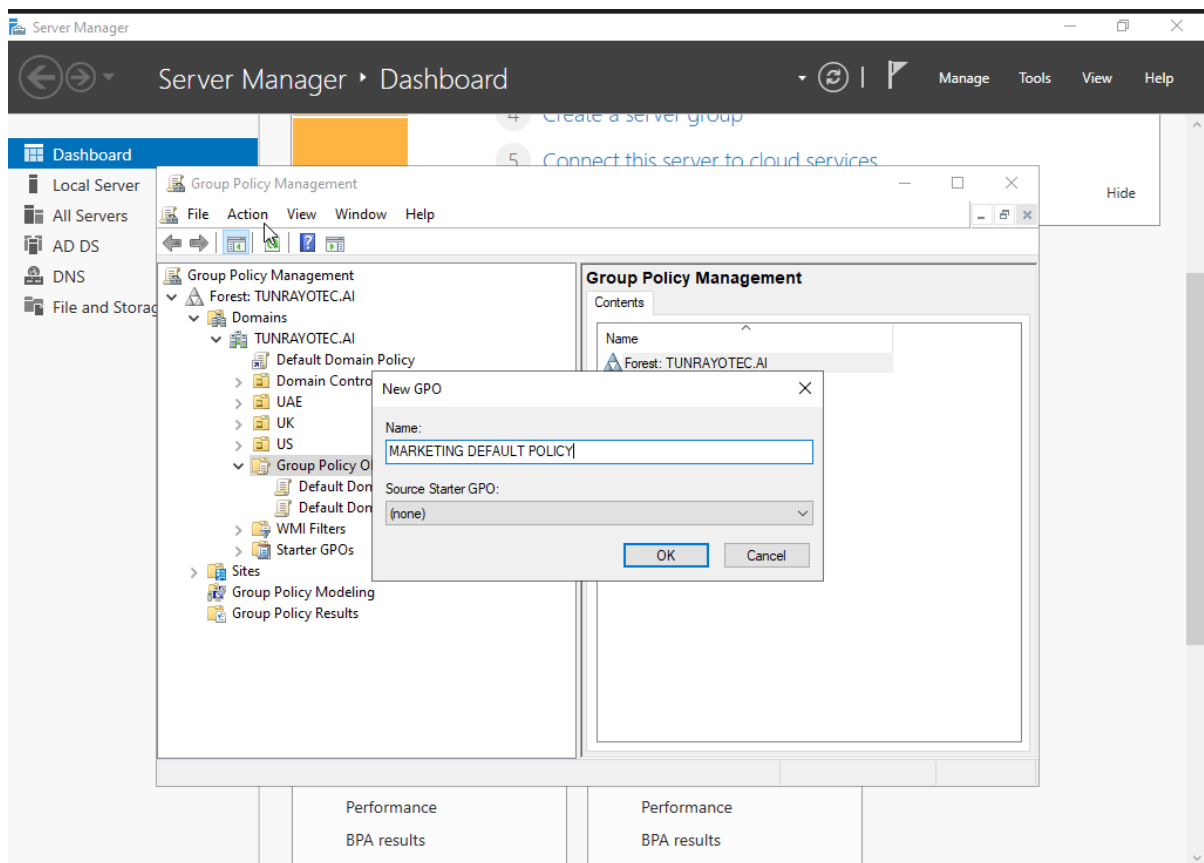

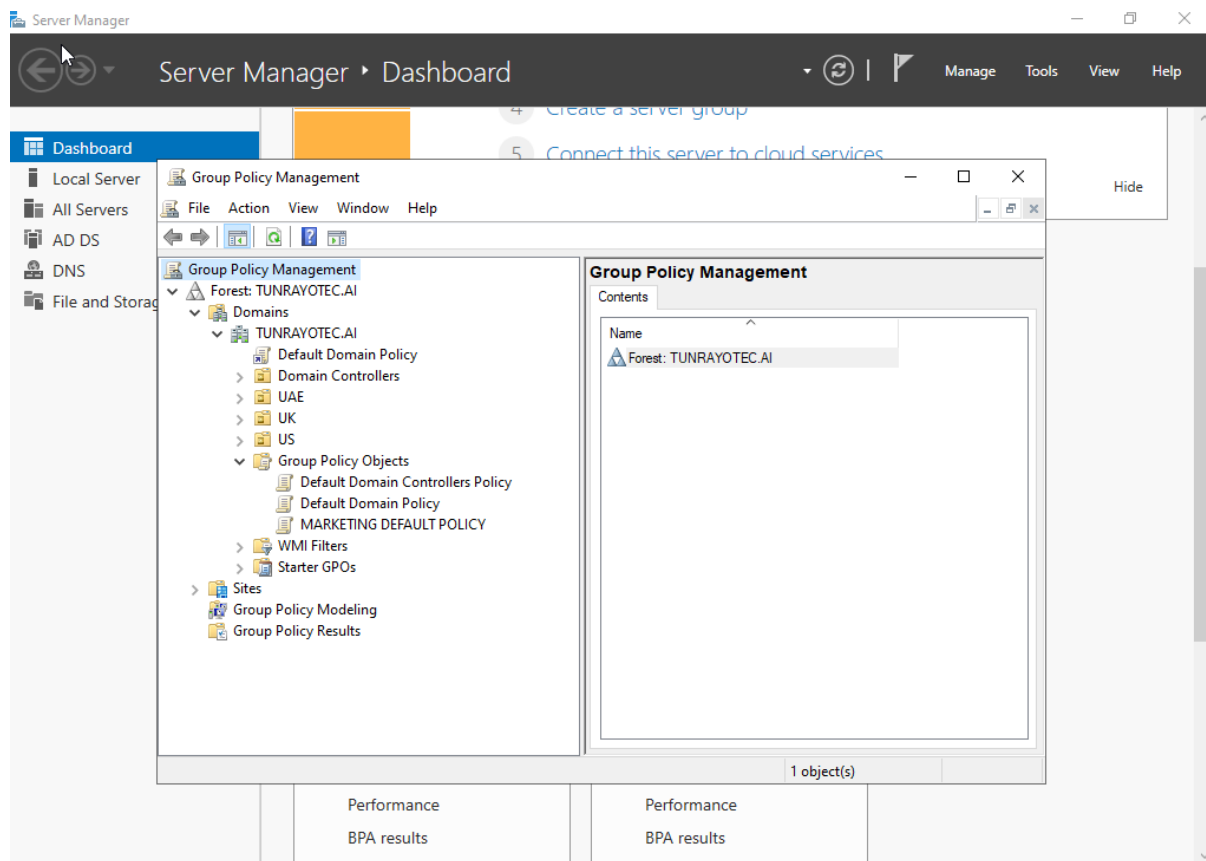

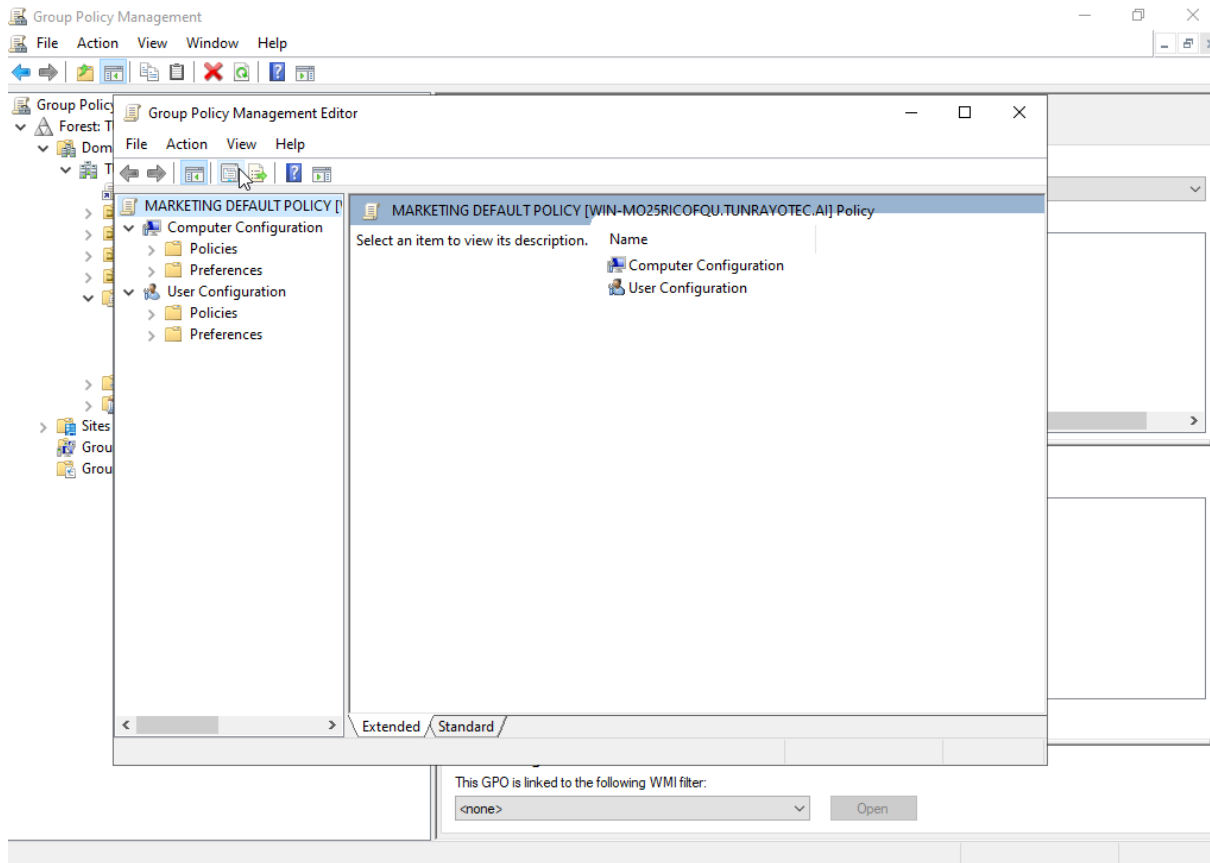

Fig 46©: The default policy is added to the Group Policy Objects

**Fig 47:** Right click on the Marketing Default Policy> edit>

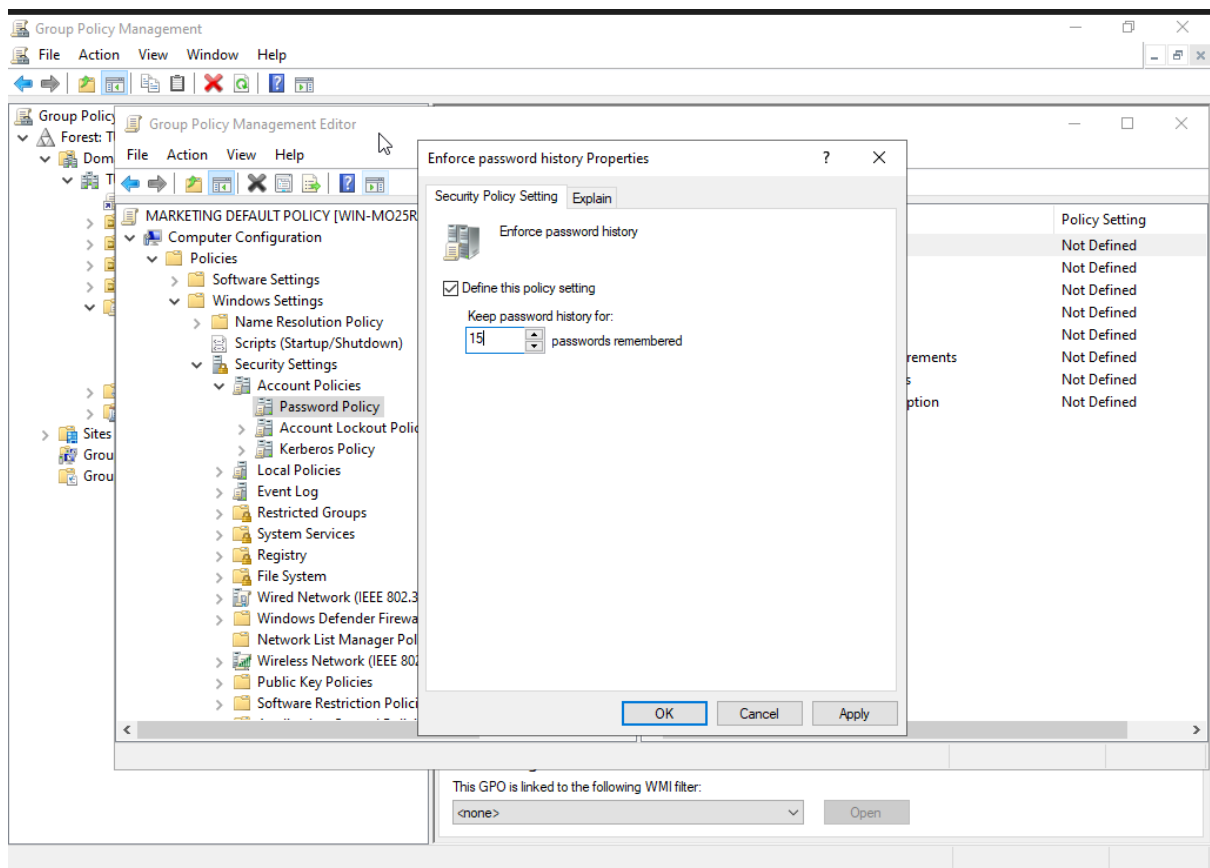

**Note:** There are two types of configurations namely:

- **Computer Configuration:** This configuration is based on the control settings that affect the entire computer, no matter who logs in.  
This is also applied at Machine Level and System start up.
- **User Configuration:** This configuration controls settings specific to an individual person using the system.  
This is applied at pre-user account level and at User login.

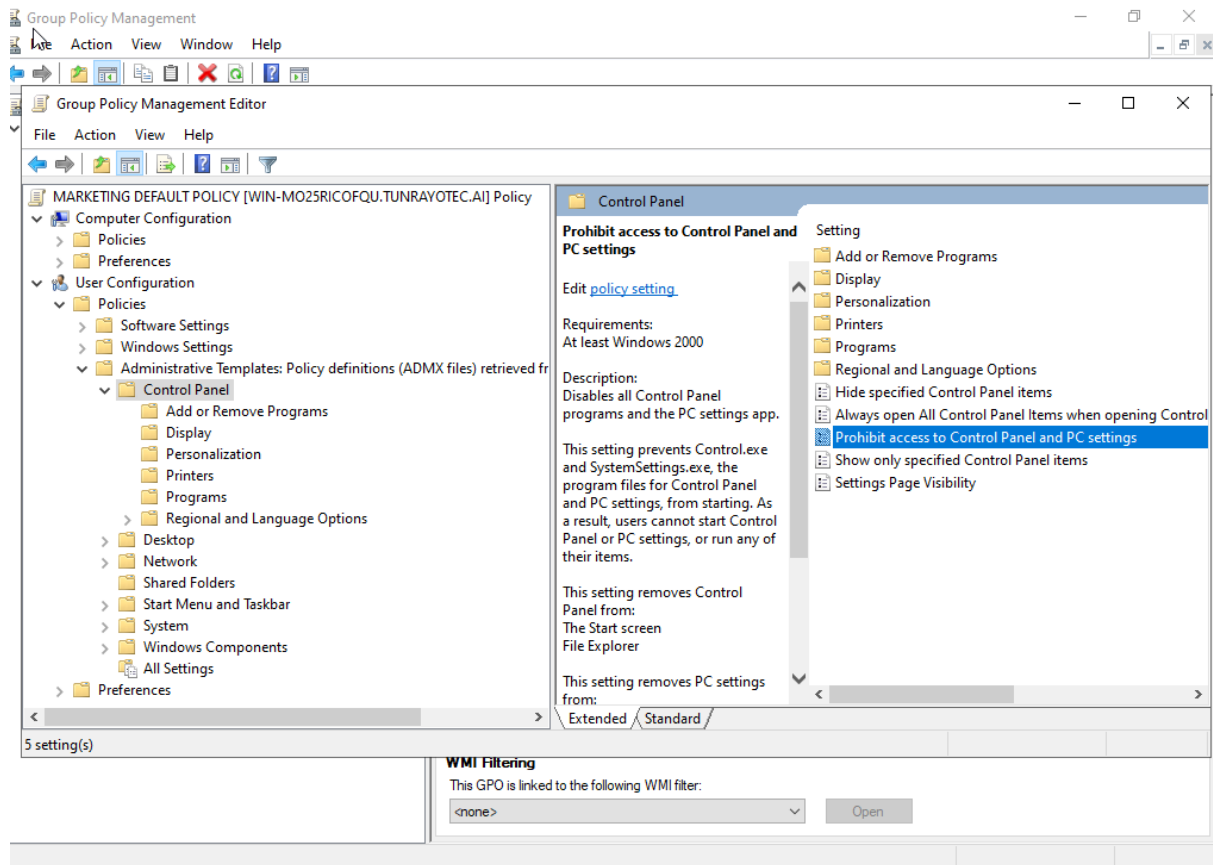

**Fig 48:** Select the Computer Configuration>Windows Settings>Security Settings>password policy>double click on enforce password history> enter details>click apply>OK.

**Note:** Password History is a security feature that remembers your previous passwords so you cannot keep reusing the same one repeatedly, until one has exhausted the defaulted number.

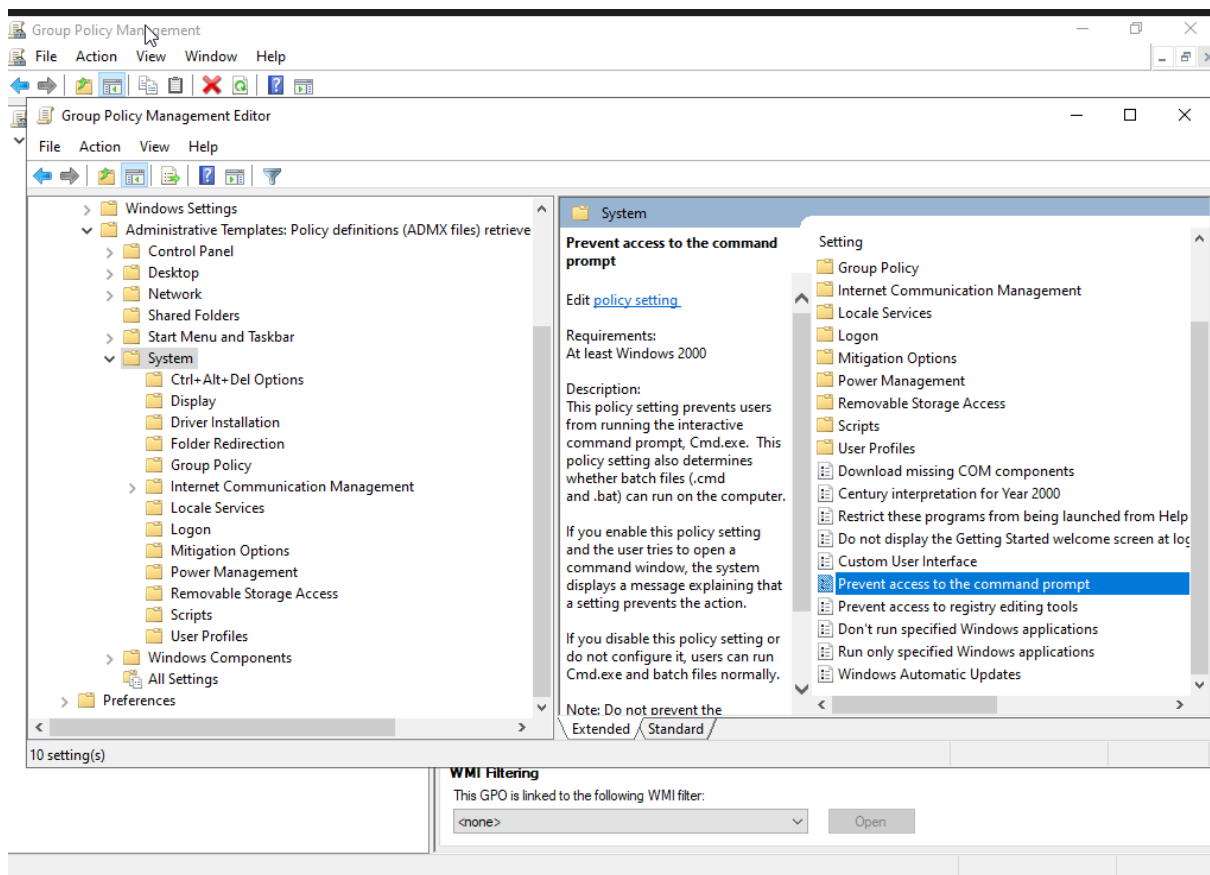

**Fig 49:** To prohibit the user to Control Panel, navigate to > User Configuration>

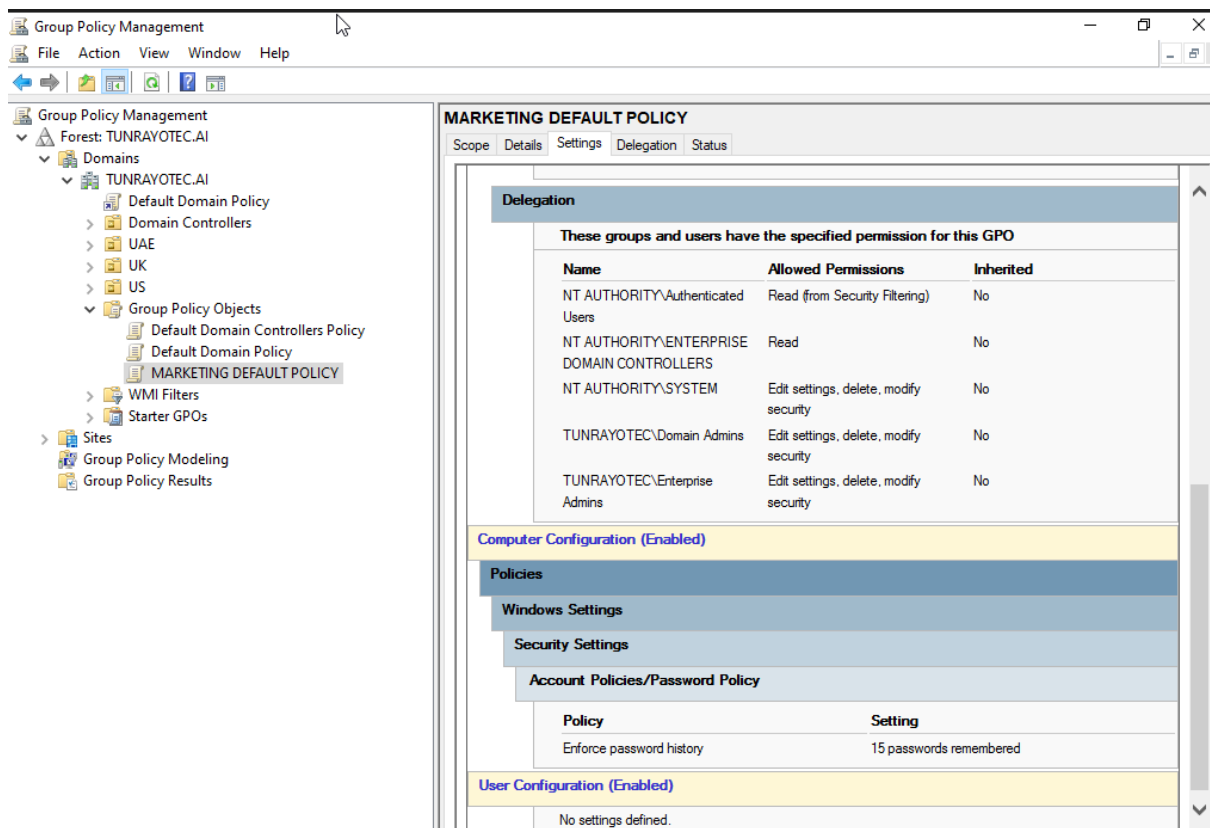

**Fig 50:** To prevent user from using the command prompt .

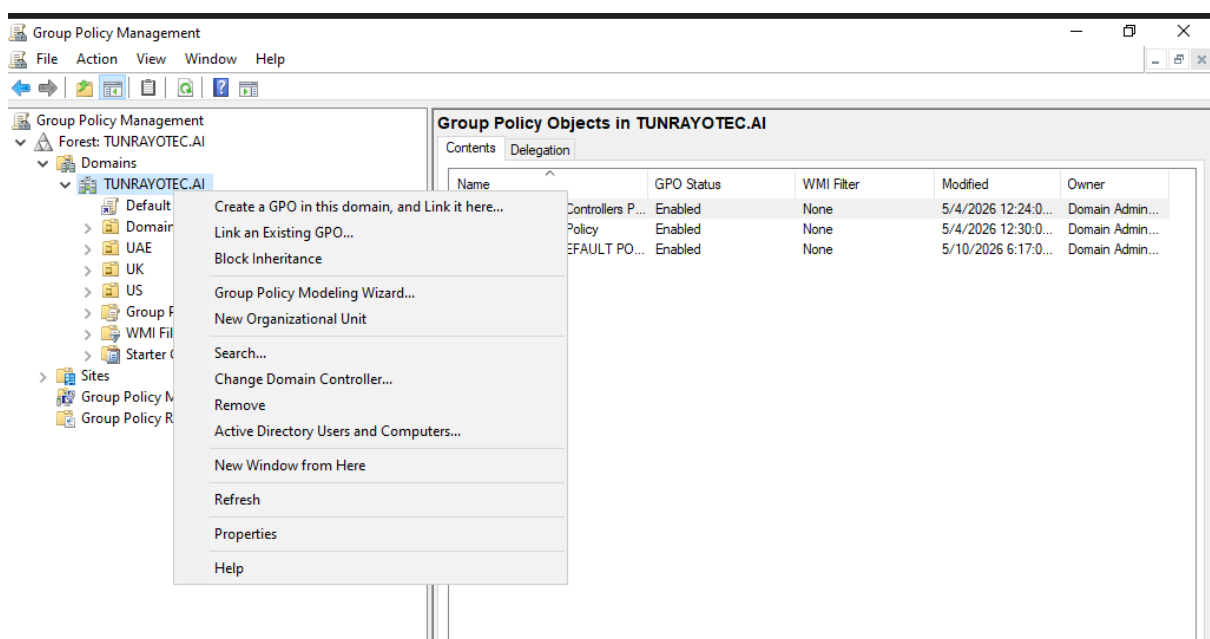

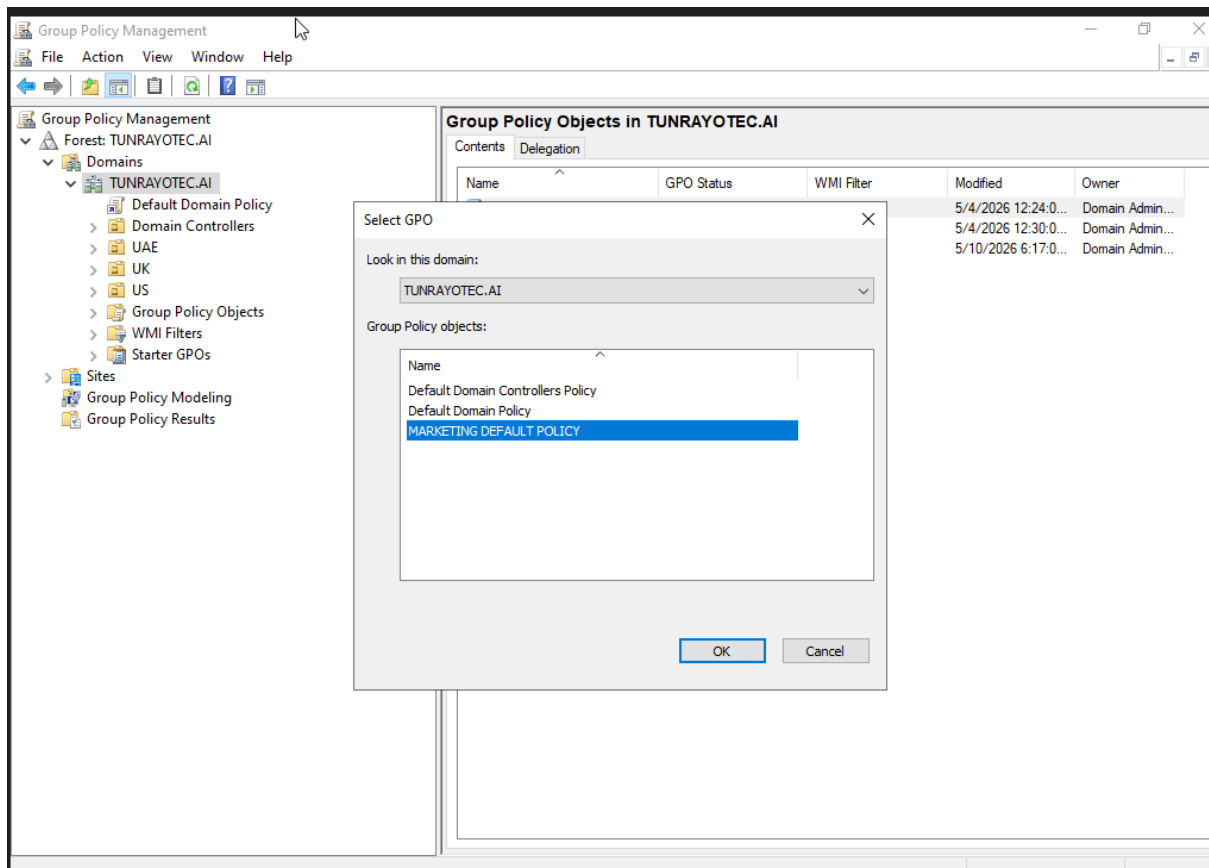

**Fig 51:** Navigate to the Group Policy Objects and verify the policies have been added to the policy.

**Fig 52:** To link the Group Policy Objects to an individual, group, or domain. Navigate to the Forest, right click > link to an existing GPO>

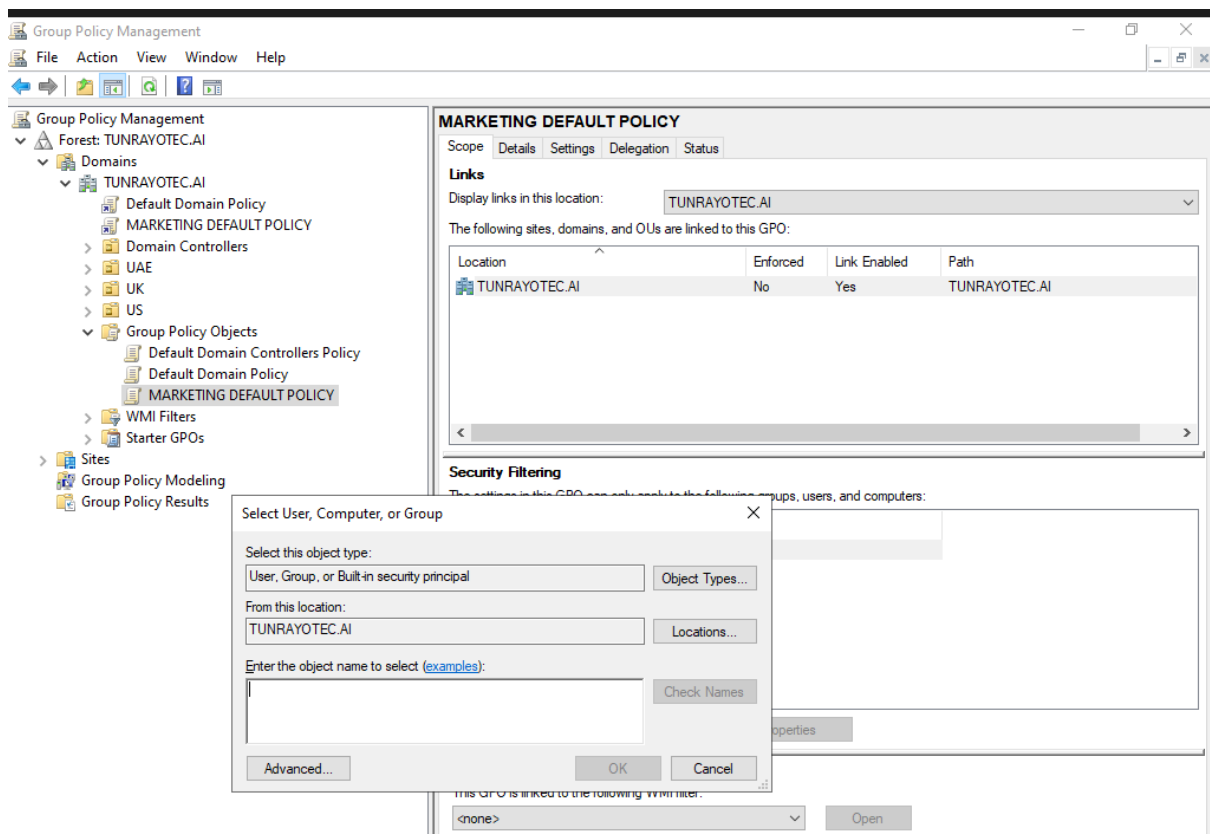

**Fig 53:** Link the policy to the Marketing Default Policy

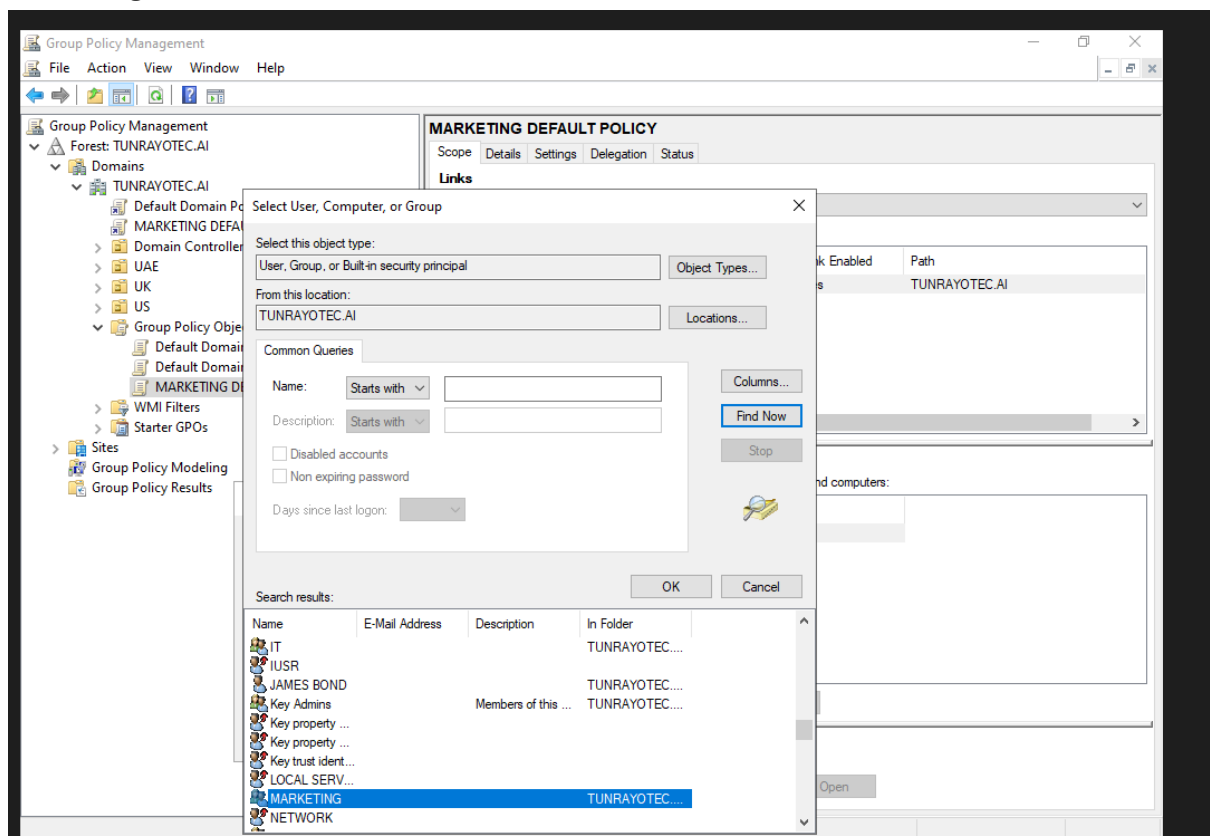

**Fig 54:** Navigate to the Marketing Default Policy >Security Filtering>Add>

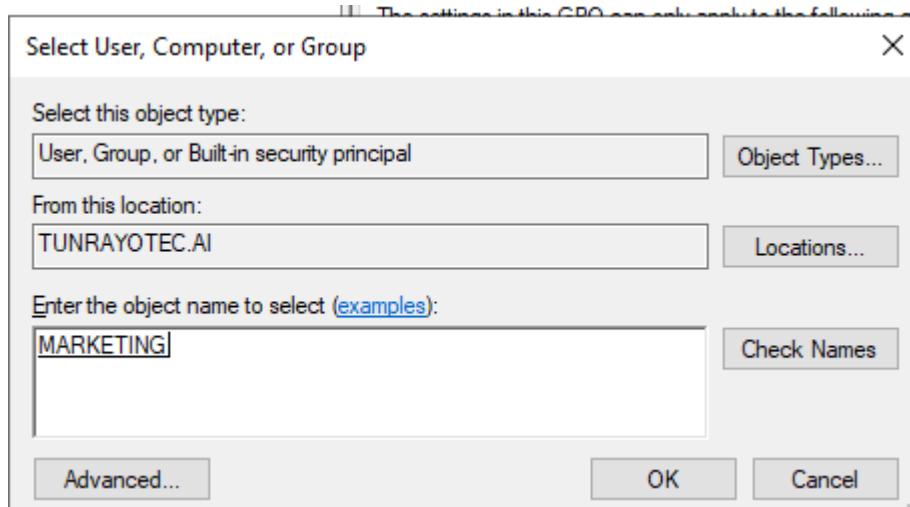

Note: You can add the policy to either a group, groups, or an individual. If it is added to a group, the policy will be added to every member of that group. You can add it to an individual in a group whereby it does not affect any other user.

**Fig 55:** Navigate to Advanced> Find Now>Search for MARKETING>Click on Marketing>click OK.

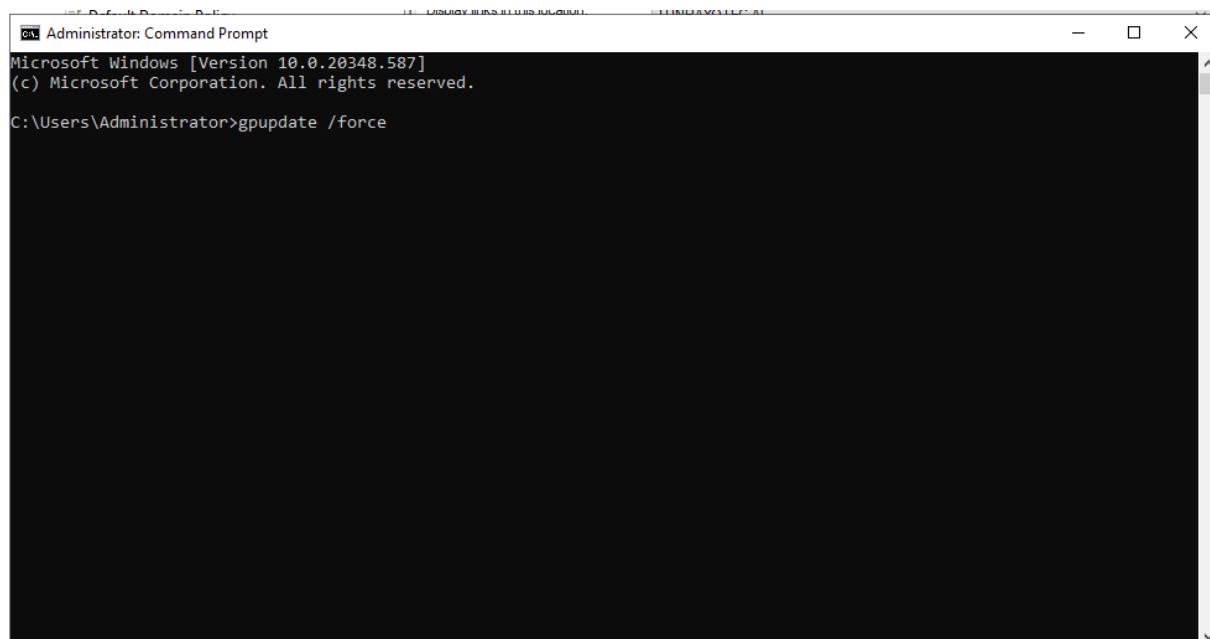

**Fig 56:**

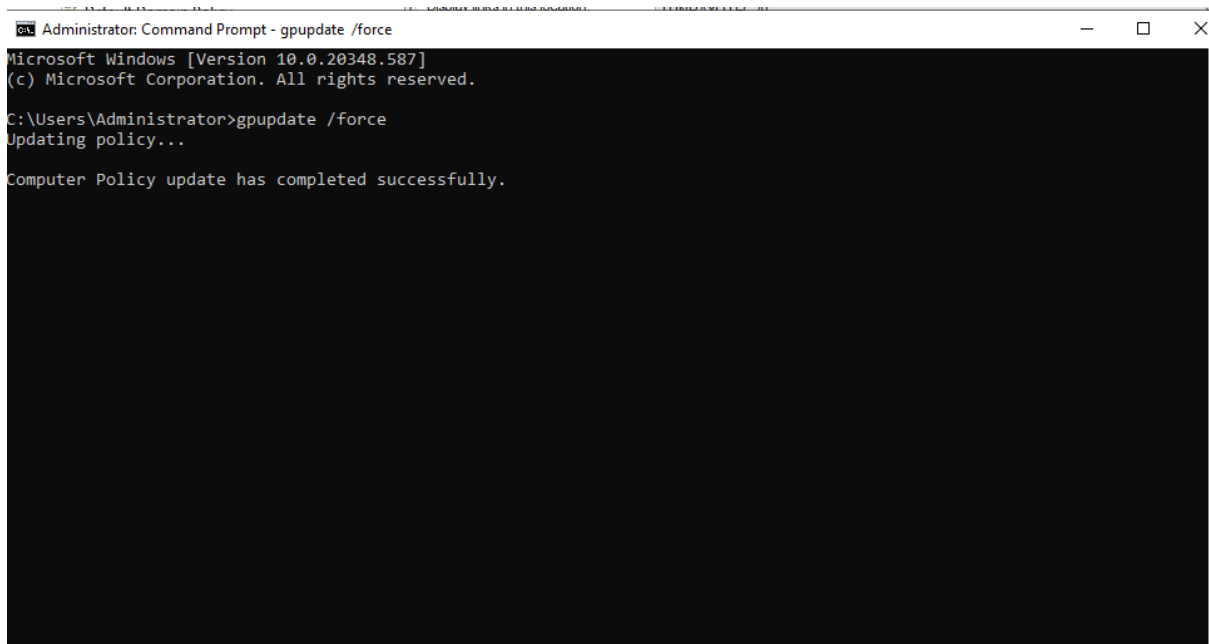

**Fig 57:** Navigate to CMD >enter gpupdate / force.

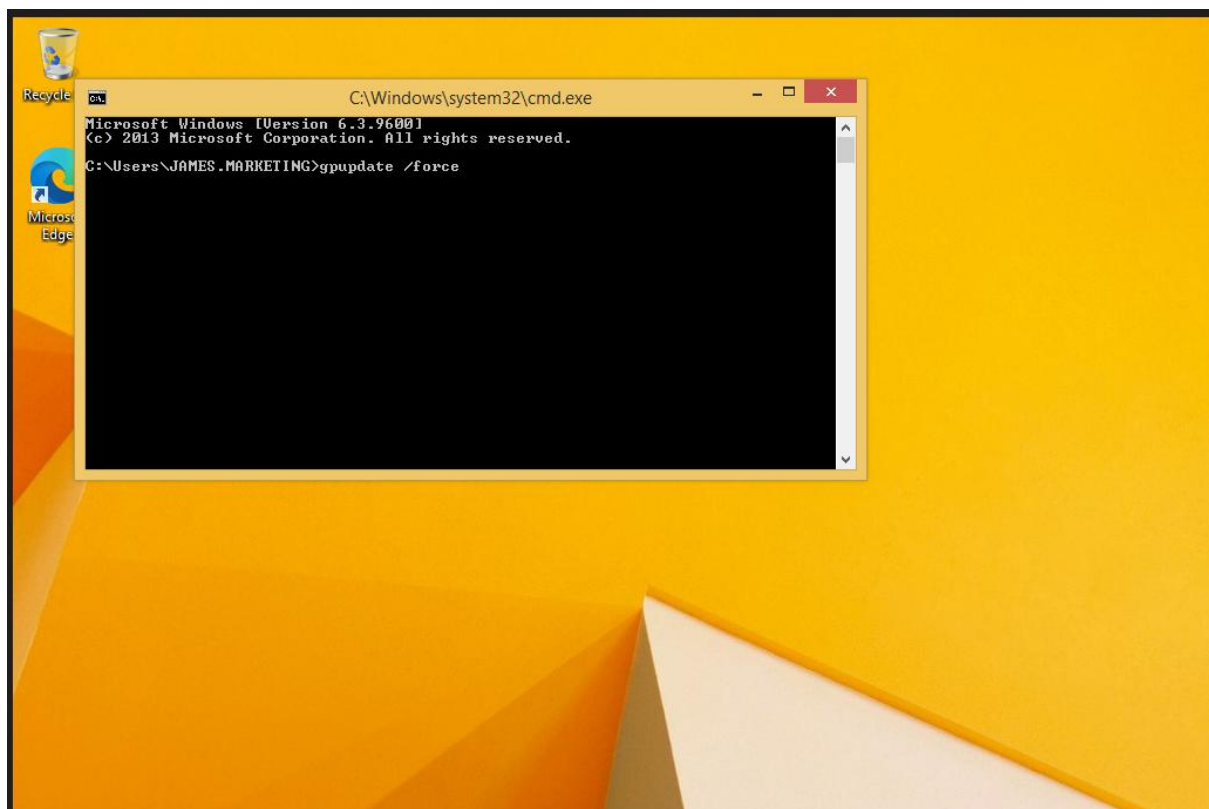

**Note:** This is to update the policy

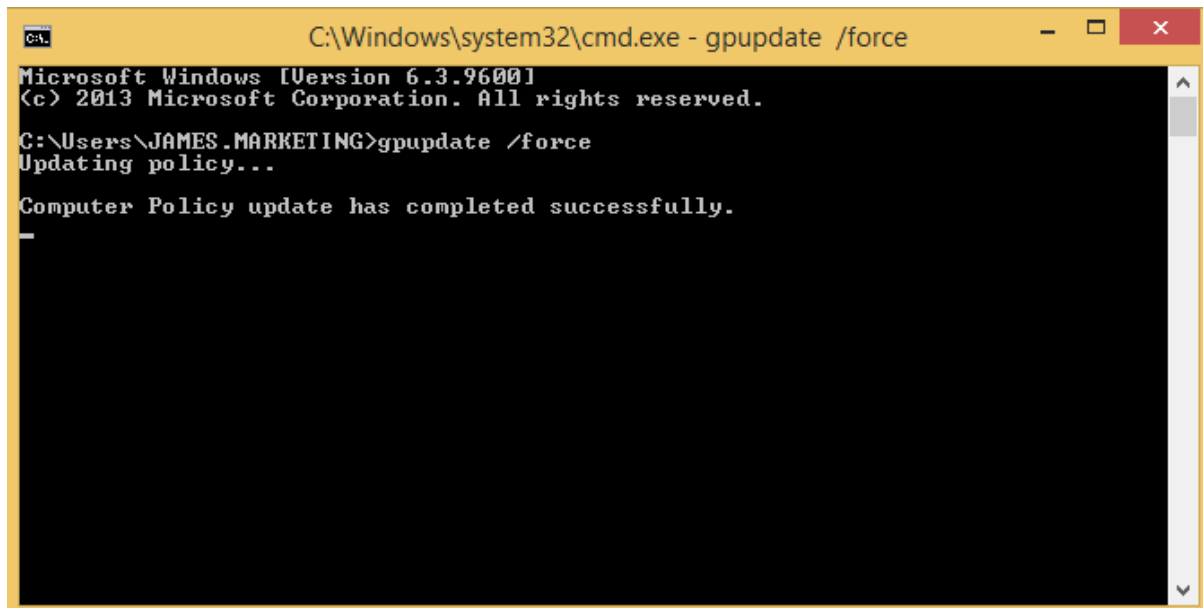

**Fig 58:**

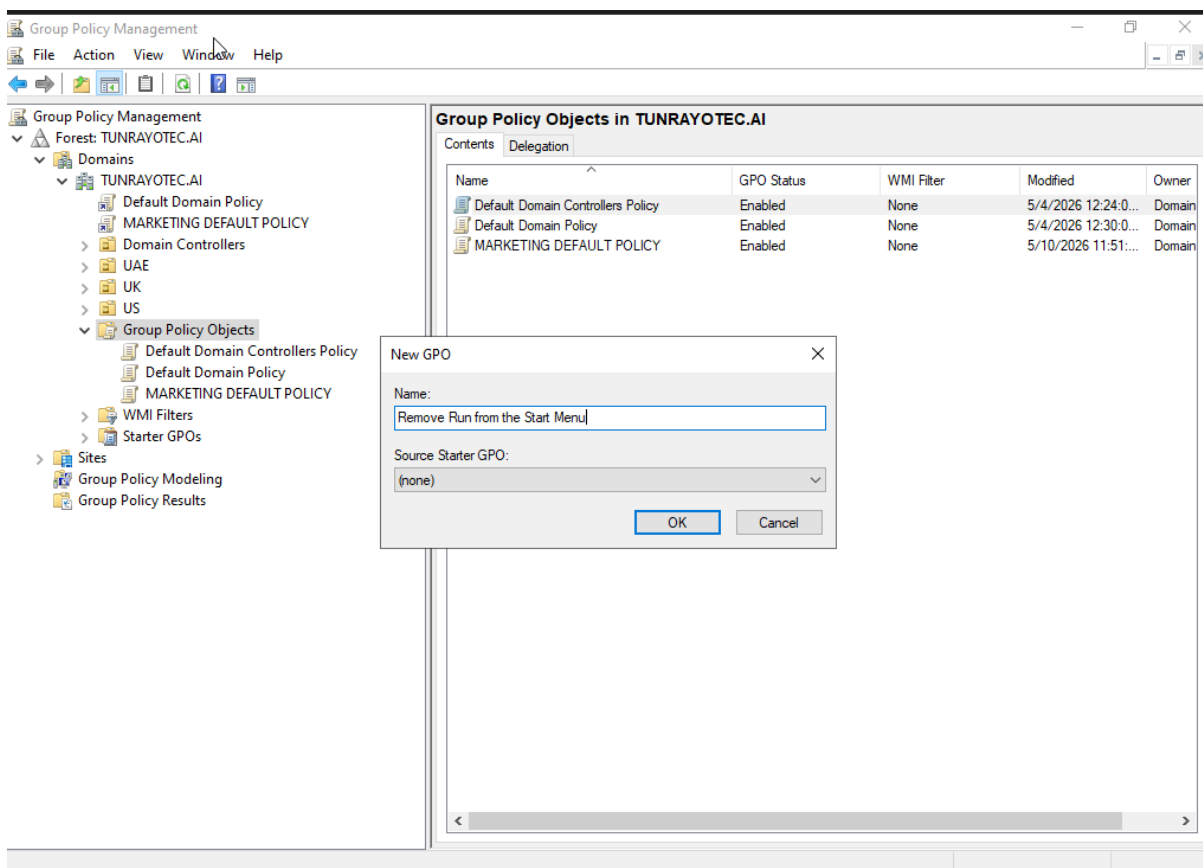

**Fig 59:** Navigate to windows 8, navigate to CMD >enter gpupdate / force. Verify and validate the policies have been implemented.
